Acrich-3, The next generation smart lighting LED technology

Agenda:

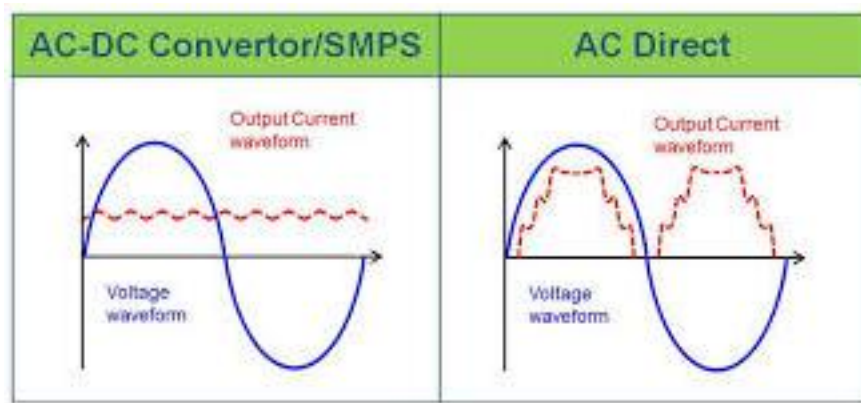

- **Transforming AC line voltage to drive LED's**
- **History of SSC direct AC technology**
- **Basic working principles of AC direct driven technology**
- **Improvements made over the the years**
- **Smart lighting possibilities going forward**
- **Some examples of AC direct LED technology**

Transforming AC line voltage to drive LEDs

- Basic idea of SSC is to **change the way we drive LEDs** and get rid of using typical SMPS (switch mode power supplies)
- SSC proposal is to use a system that is based in a **sequential mode driver for LEDs** following the mains voltage sinusoidal wave

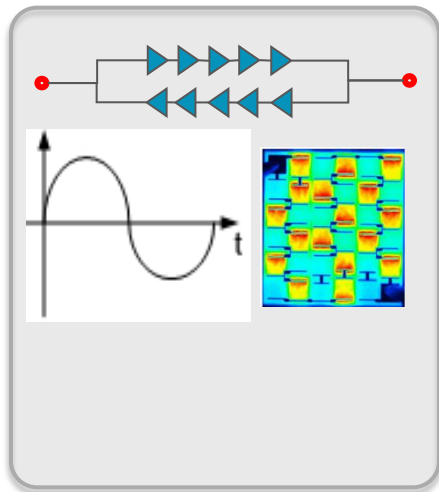

Basic working principle

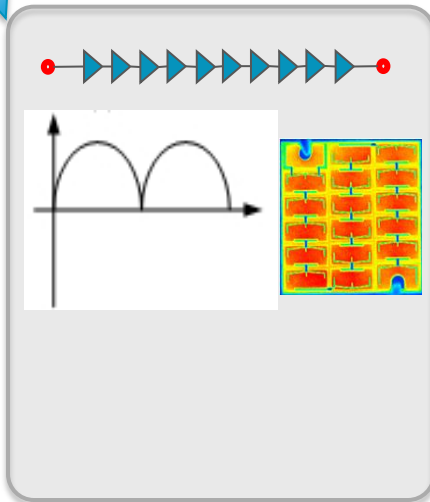

History of Seoul Semiconductor Acrich Technology

Opto-electrical
Efficiency: 50%

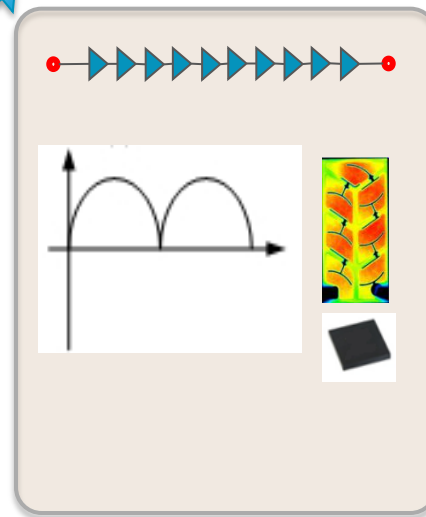

Anti Parallel
Acrich LEDs 220Vf

Opto-electrical
Efficiency: 65%

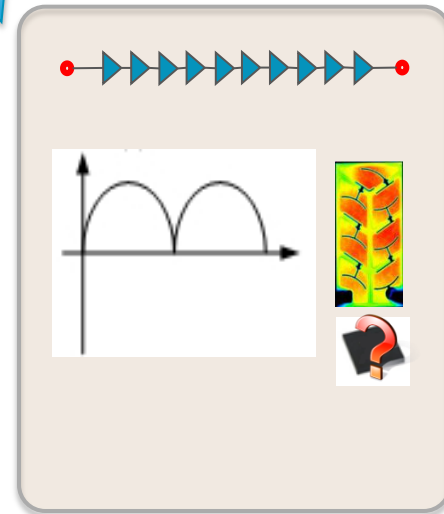

**One direction
LEDs
+
Bridge Diode**

Opto-electrical
Efficiency: 75%

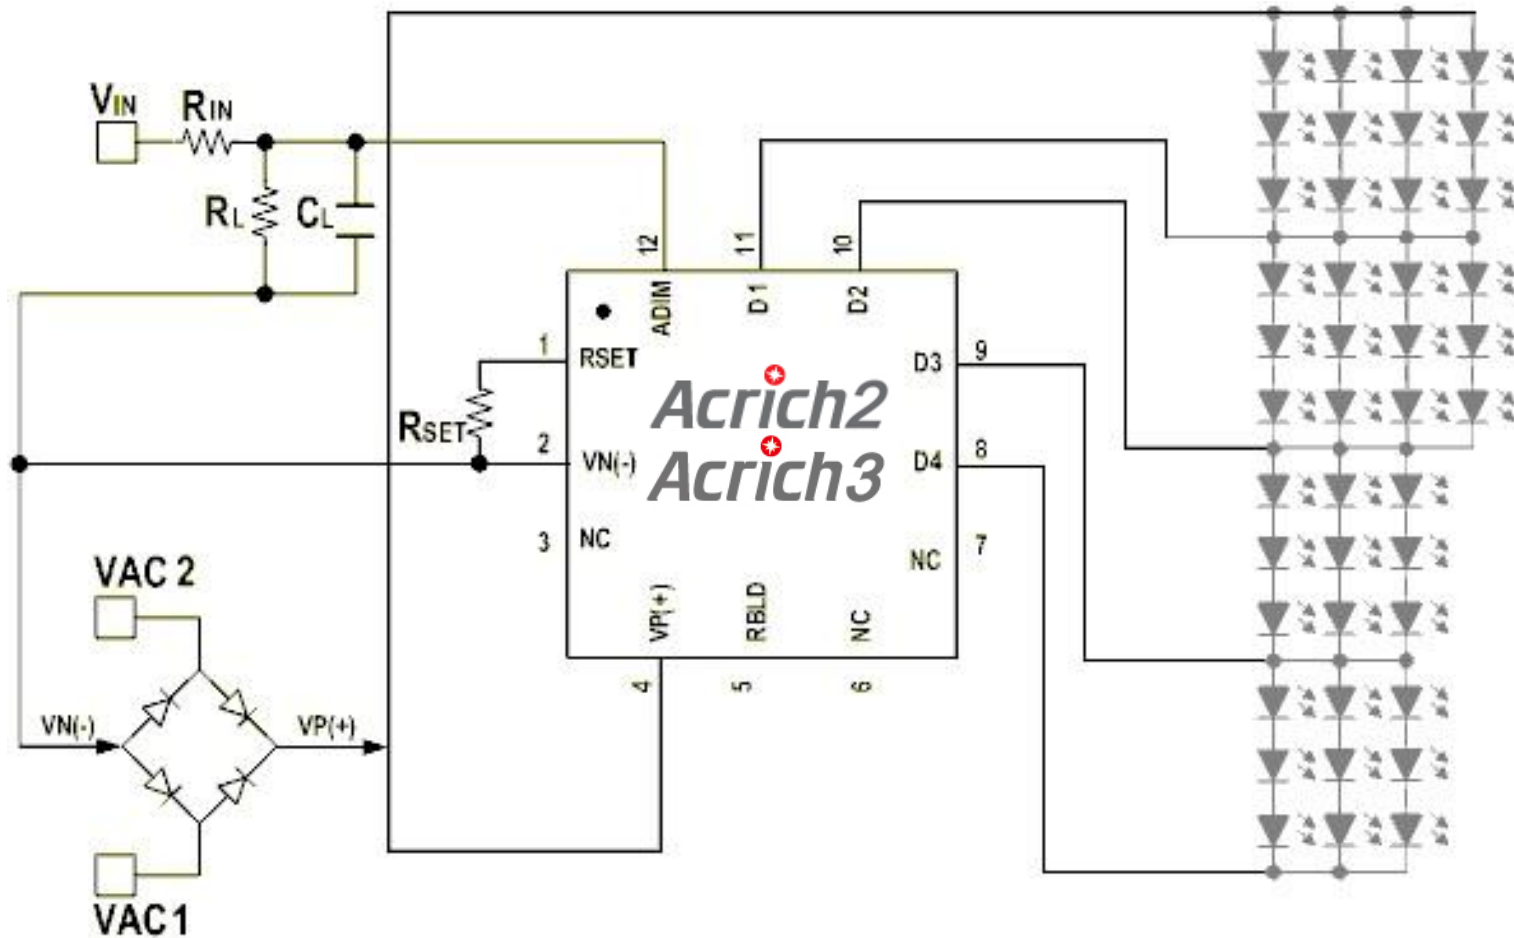

**IC Based
LED System**
Acrich
Acrich 2

Opto-electrical
Efficiency: 85%

**IC Advanced
LED System**
Acrich 2.5
Acrich 3.0
Acrich 4.0 ??

Basic Acrich working system

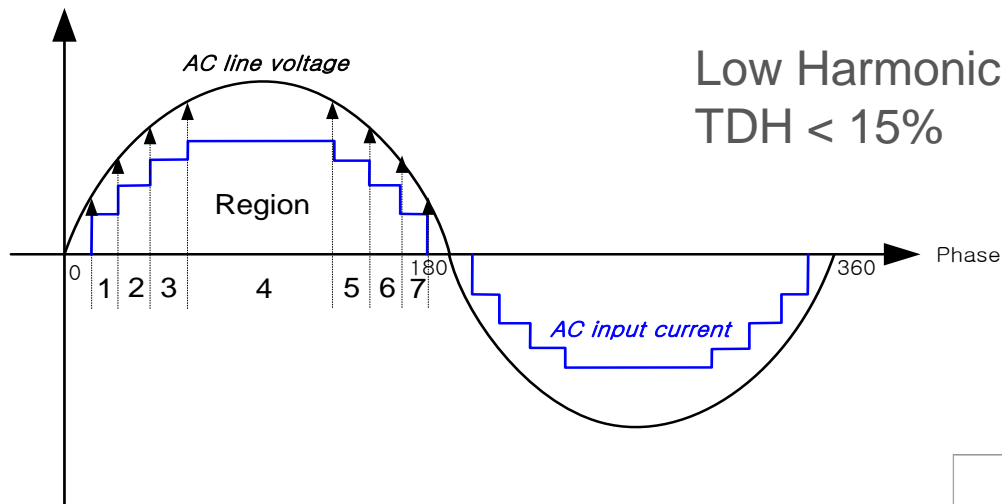

Basic Acrich working system

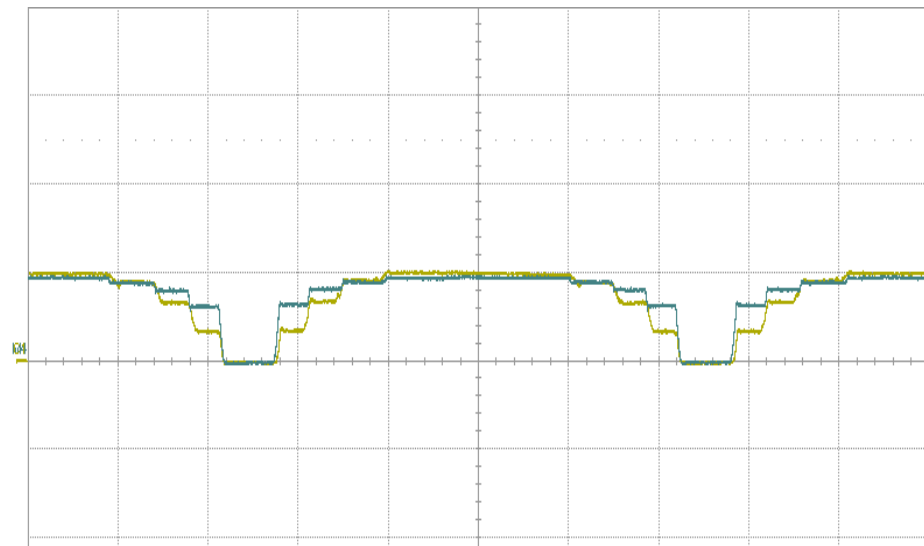

High Power Factor: $PF > 0,97$

Low Harmonic Distortion:
 $TDH < 15\%$

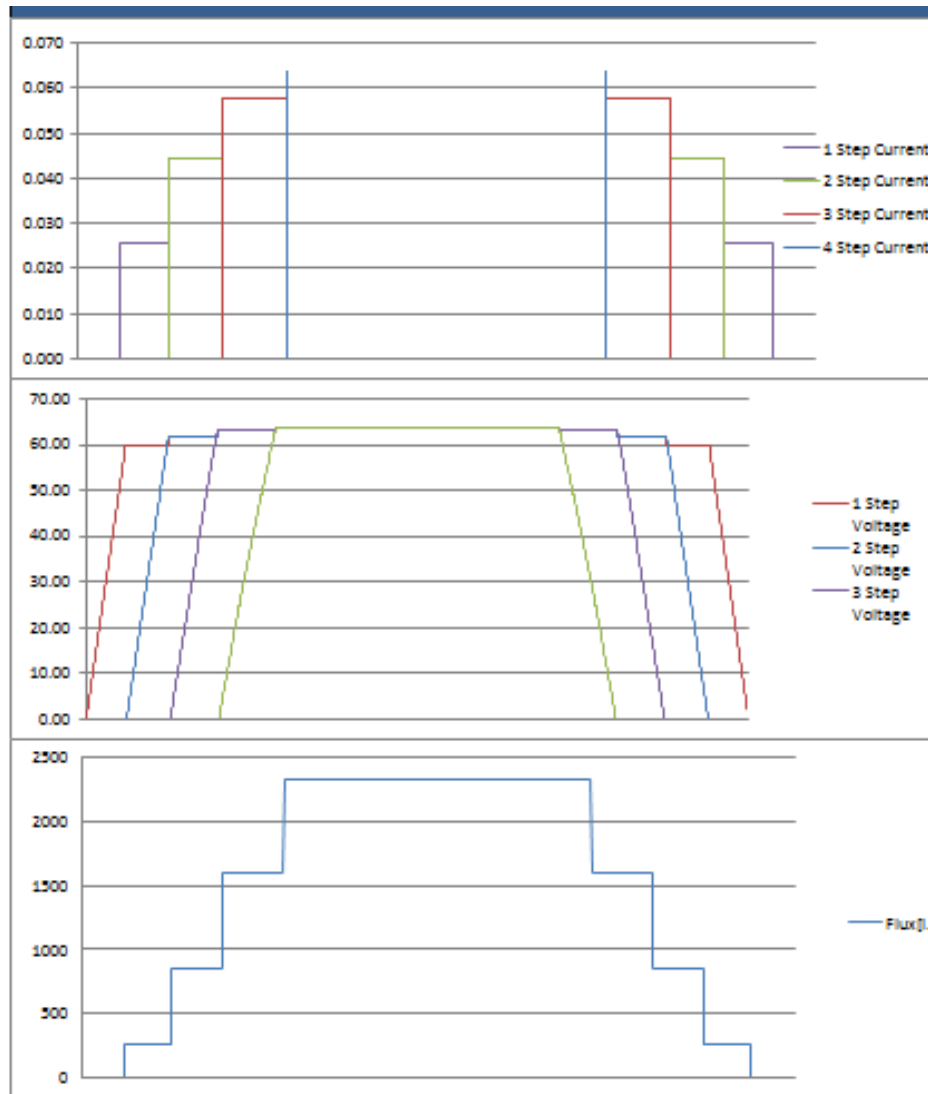

Voltage and current to the Acrich system

Light output and current in the LEDs of a basic Acrich system

Basic Acrich working system

High Power Factor:
 $PF > 0,97$

Low Harmonic
 Distortion:
 $TDH < 15\%$

Basic Acrich working system

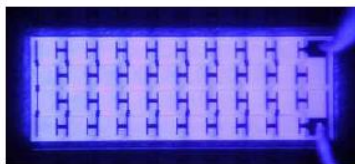

Acrich 3.0 Module Simulator

1) Design			Product Name				
No	Item	Unit	Value				PKG current
1	Input Voltage	V	230				
2	Input Freq.	Hz	50				
3	1 Step LED array's	ea	series	3	parallel	3	17.08
	2 Step LED array's	ea	series	3	parallel	3	16.80
	3 Step LED array's	ea	series	3	parallel	3	15.82
	4 Step LED array's	ea	series	3	parallel	3	13.71
4	R-set	Ω	5000				LED TOTAL 36 EA
5	IC type	B type <input type="button" value="v"/>					
6	PKG type	P/N	SAW8KG0B[5630 7Ce <input type="button" value="v"/>	lv rank	J0 [60.95] <input type="button" value="v"/>	Vf rank	A [21.1] <input type="button" value="v"/>

2) Module Specification				
No	Item	Unit	Typ	Target
1	Power Consumption	W	12.011	
2	Luminous Flux	lm	1386.22	
3	Acrich Module Efficacy	lm/W	115.41	
4	Power Factor	PF	0.989	
5	Circuit Efficacy	%	84.72%	

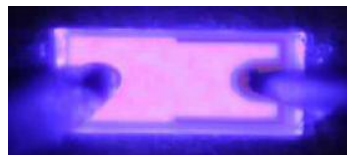

Basic Acrich working system

Development of the **M**ulti **J**unction **T**echnology LEDs Patented by SSC in 2007

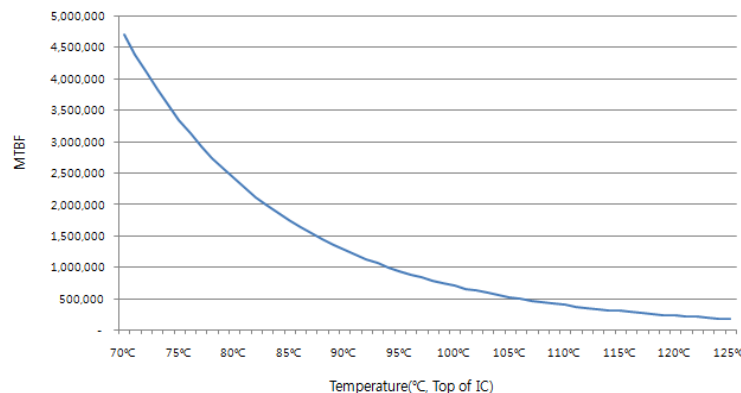

MJT LED

Example with
 $21 \text{ cells} \times 3V_f = 63V_f$

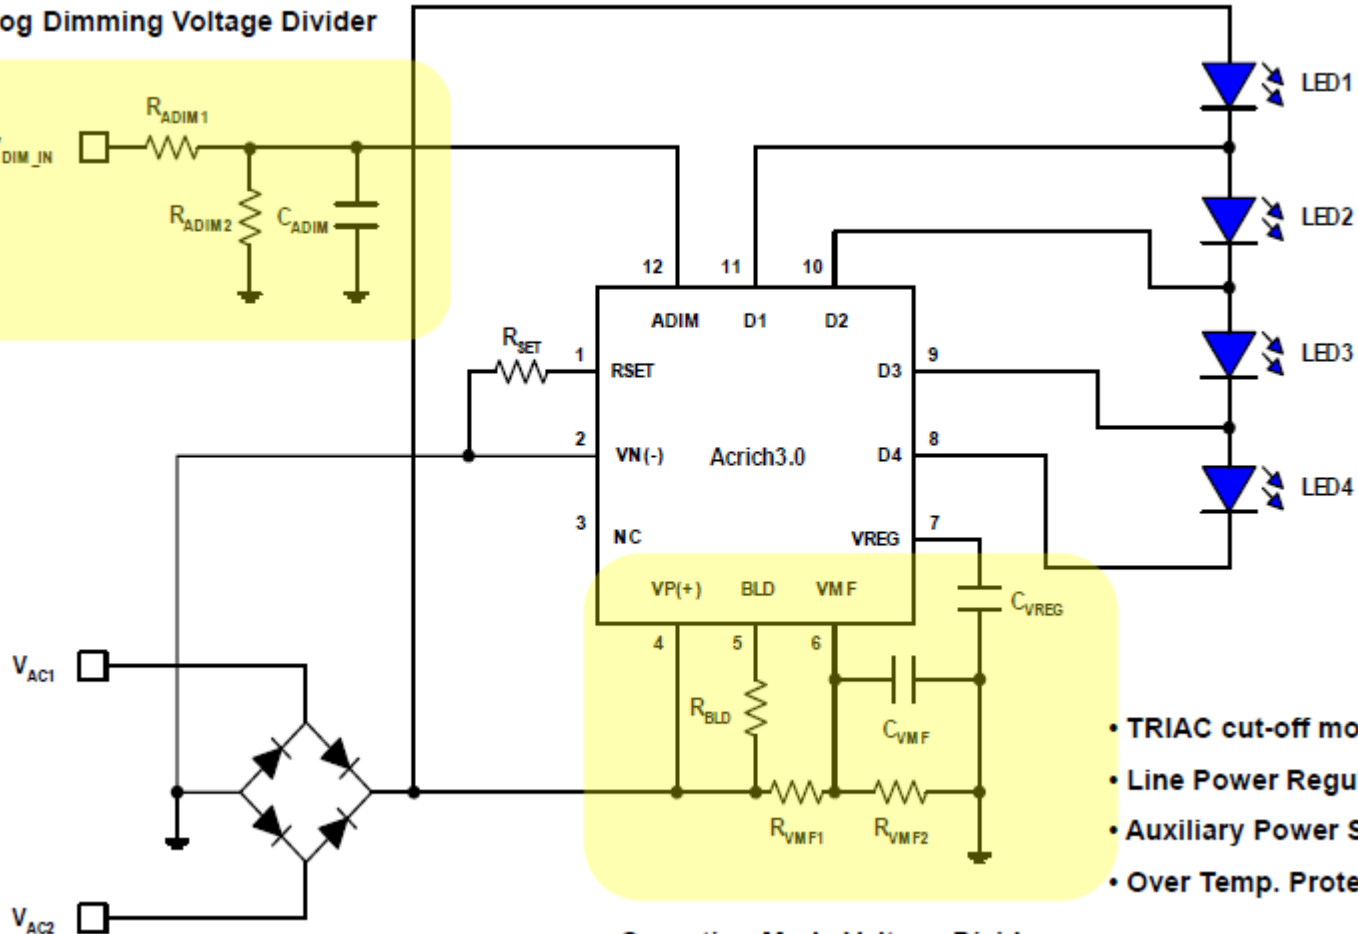

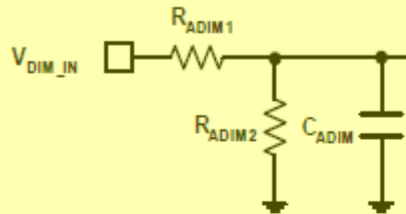

Typical DC LED
 $1 \text{ cell} \times 3V_f = 3V_f$

Longer lifetime of Acrich system compared with a SMPS driver

Improvements made

• Analog Dimming Voltage Divider

• Operation Mode Voltage Divider

- TRIAC cut-off mode (Type2)
- Line Power Regulation
- Auxiliary Power Source 7V
- Over Temp. Protection

Analog dimming 0-10V / PWM

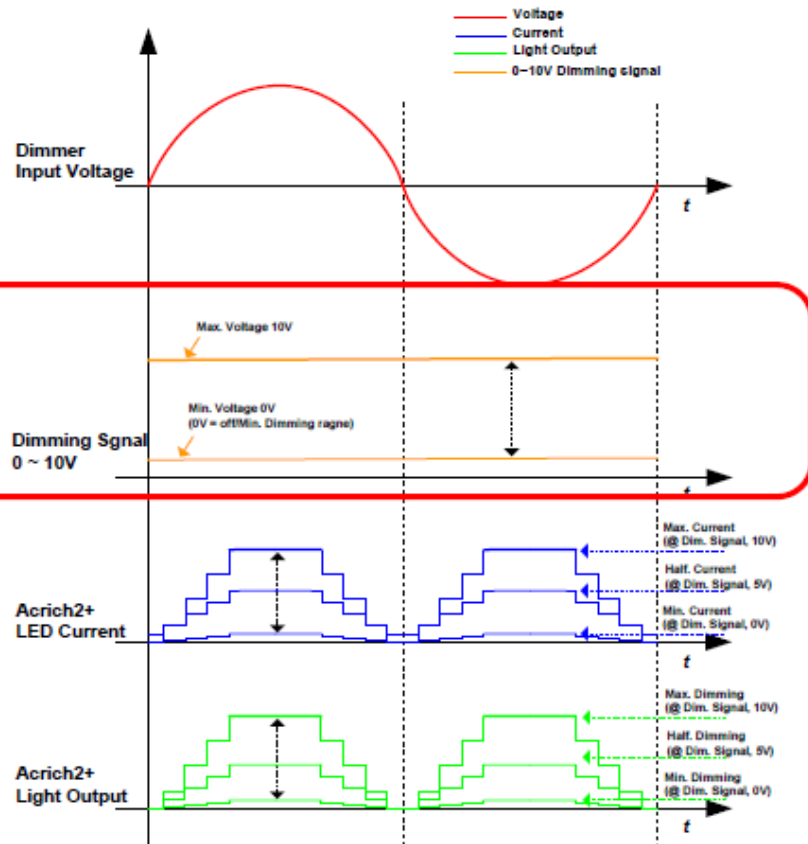

Figure 1. Analog Dimming Timing chart

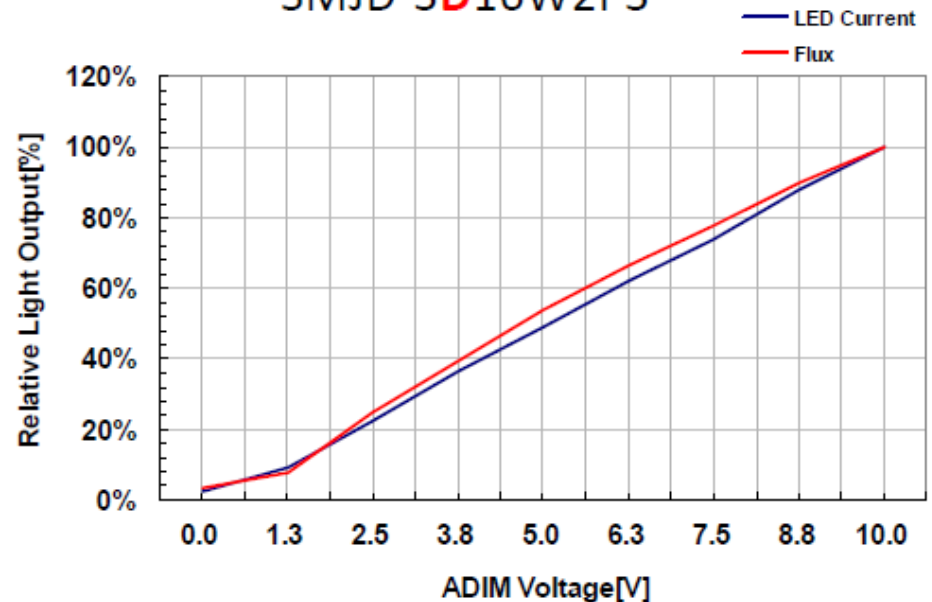

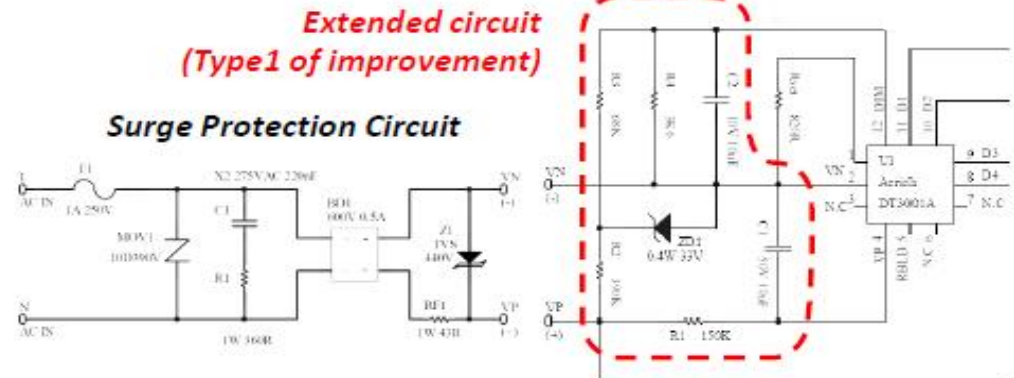

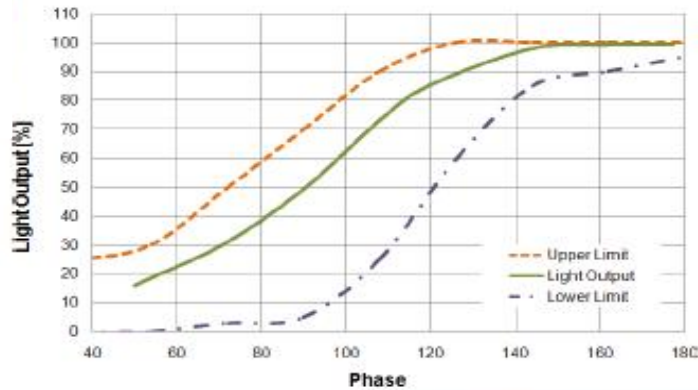

Figure 2. Analog Dimming Curve
(Measurements performed at Acrich2+ 16W Module)

Improvements made, TRIAC

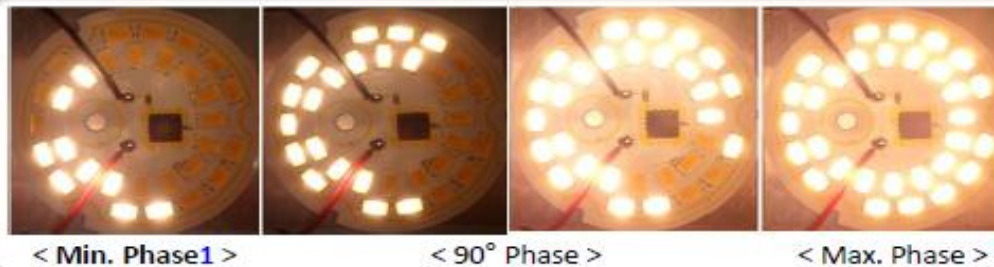

Improved solution on module level is compatible with **NEMA SSL-6**

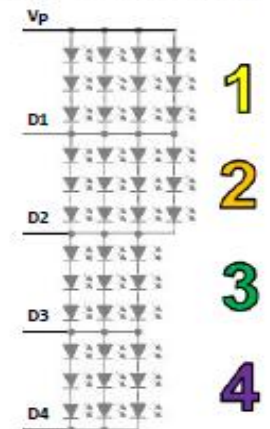

Regular

Improved

Example LED Array:

(4 groups of LEDs)

Improvements made, Flickering

■ Percent Flicker = $100 \cdot (A-B) / (A+B)$

- ✓ Described in early versions of the IESNA Handbook
- ✓ Percent modulation of the intensity waveform
- ✓ Range is from 0% to 100%
- ✓ 0% is a pure DC waveform
- ✓ 100% would occur when the range extends to 0 light output at any time during the waveform
- ✓ Does not include information about the duty cycle

■ Flicker Index = $\text{Area 1} / (\text{Area 1} + \text{Area 2})$

- ✓ Relates the area under the curve above the average light intensity to
- ✓ the area under the curve below the average light intensity.
- ✓ Range is from 0 to 1.0
- ✓ 0 is a pure DC waveform
- ✓ 1.0 can only occur with the most dramatic changes in light output
- Includes the effects of duty cycle

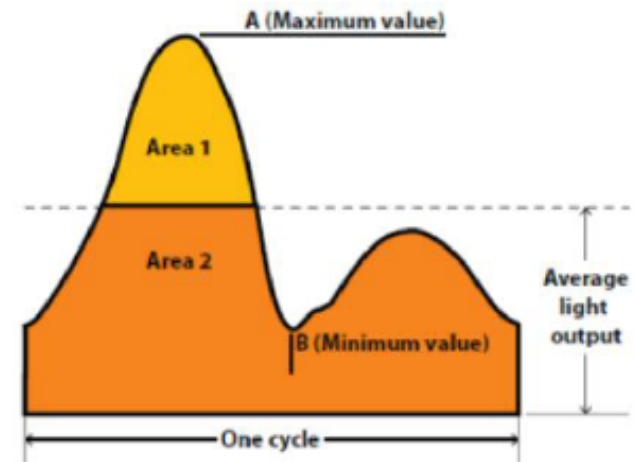

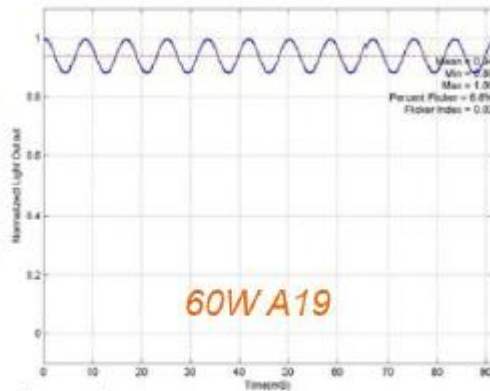

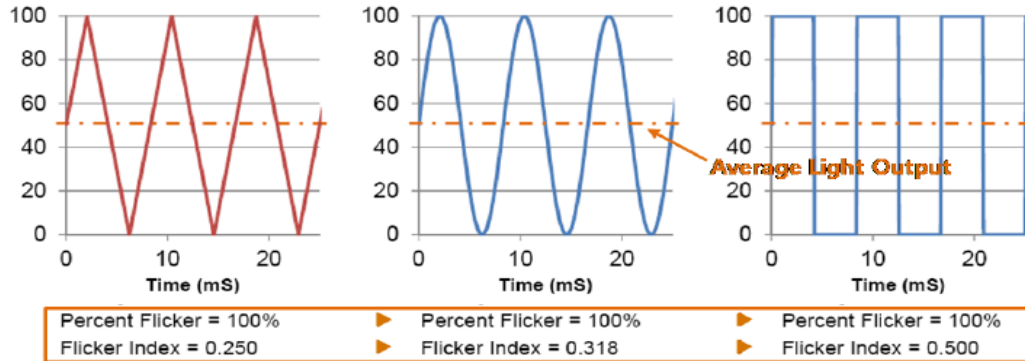

Figure 1. Defining Flicker Index and Percent Flicker
 (IES Lighting Handbook, Kaufman, 1984)

$$\text{Percent Flicker} = \frac{(\text{Max} - \text{Min})}{(\text{Max} + \text{Min})} \times 100$$

$$\text{Flicker Index} = \frac{(\text{Area 1})}{(\text{Area 1} + \text{Area 2})}$$

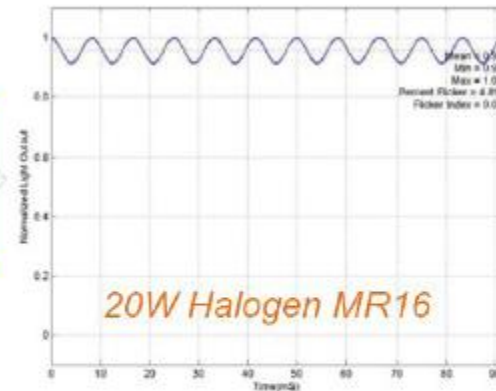

Improvements made, Flickering

1. A19 Incandescent

Flicker Index: 0.02

Percent Flicker: 6.6%

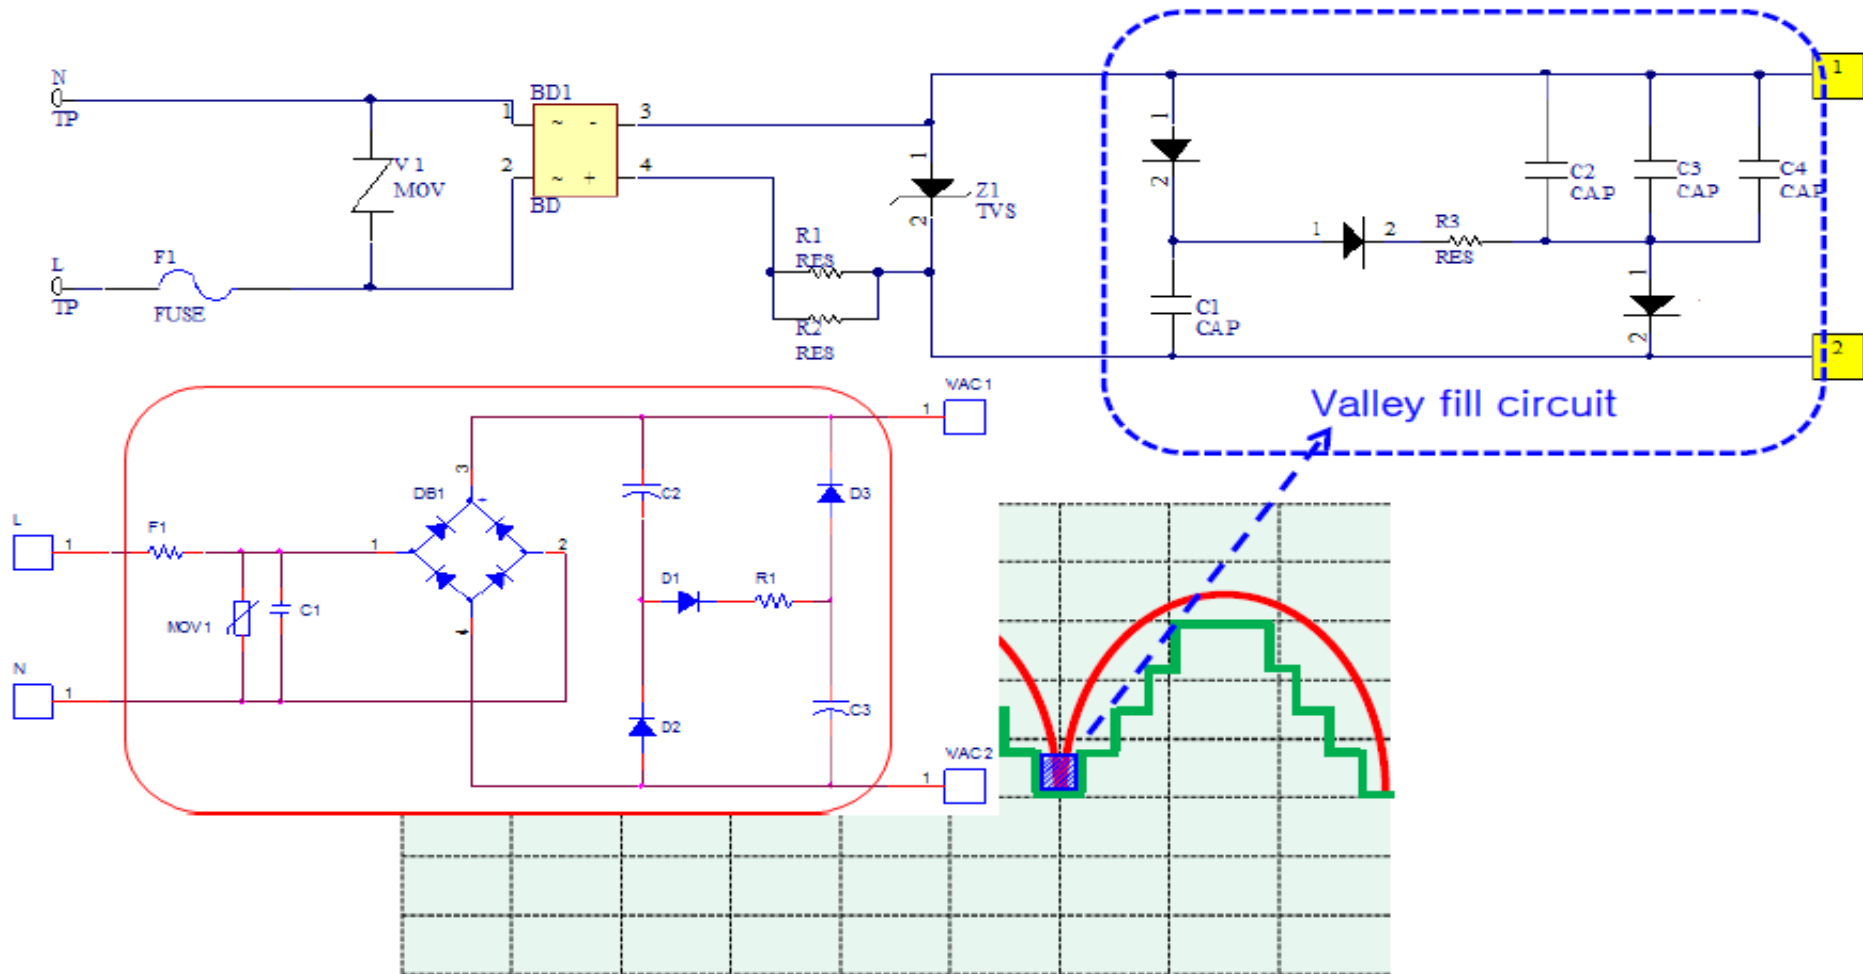

4. R20 Halogen

Flicker Index: 0.04

Percent Flicker: 13.4%

Improvements made, Flickering

Valley fill circuit to meet PSE regulation

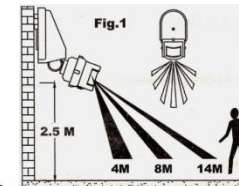

Smart Lighting Solutions

 security

LED

MJT LEDs for best
 compact solutions

Design freedom

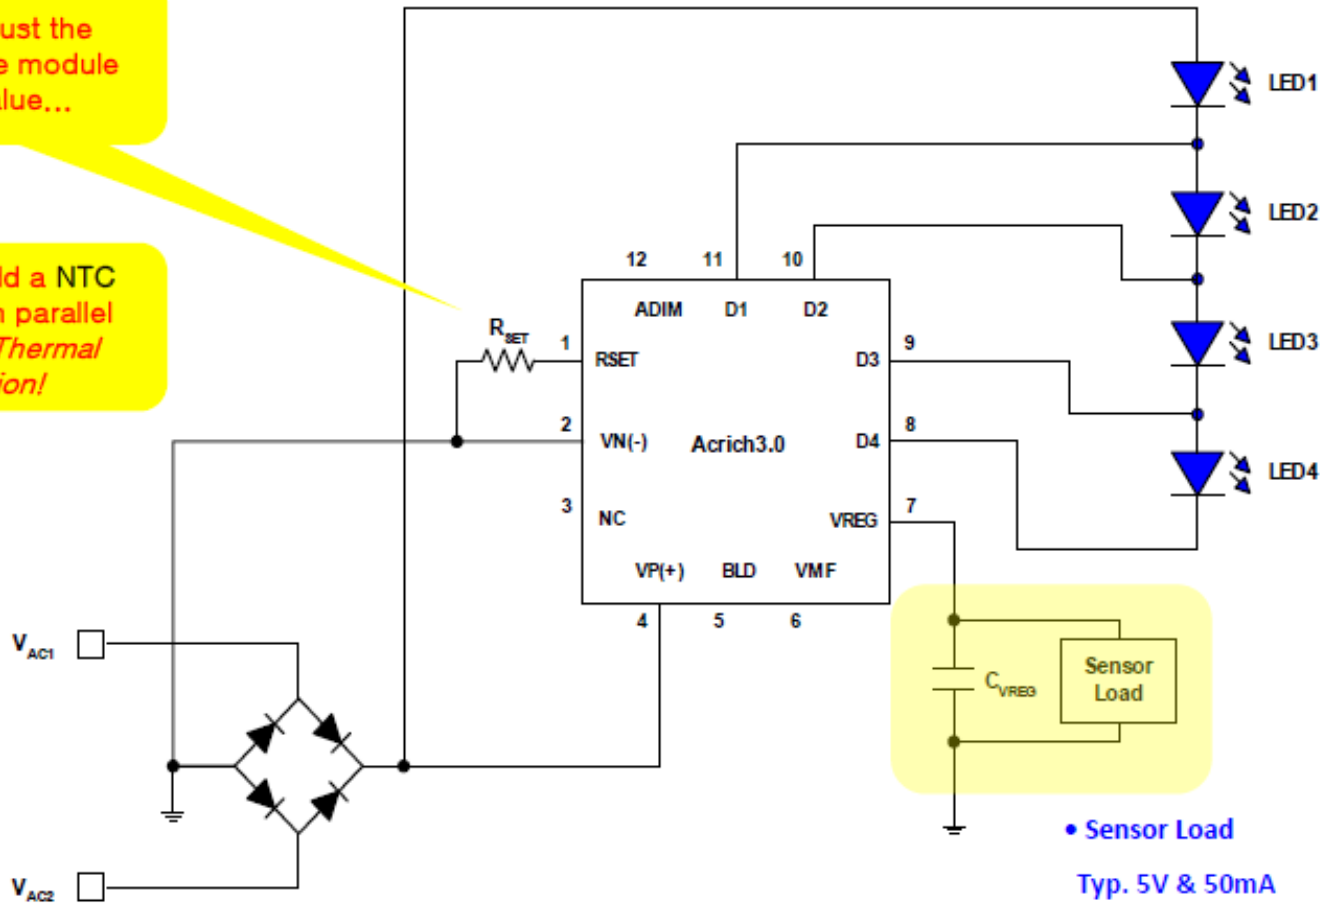

Reduced mechanic parts

Low cost than
 DC solution

Smart Lighting Solutions

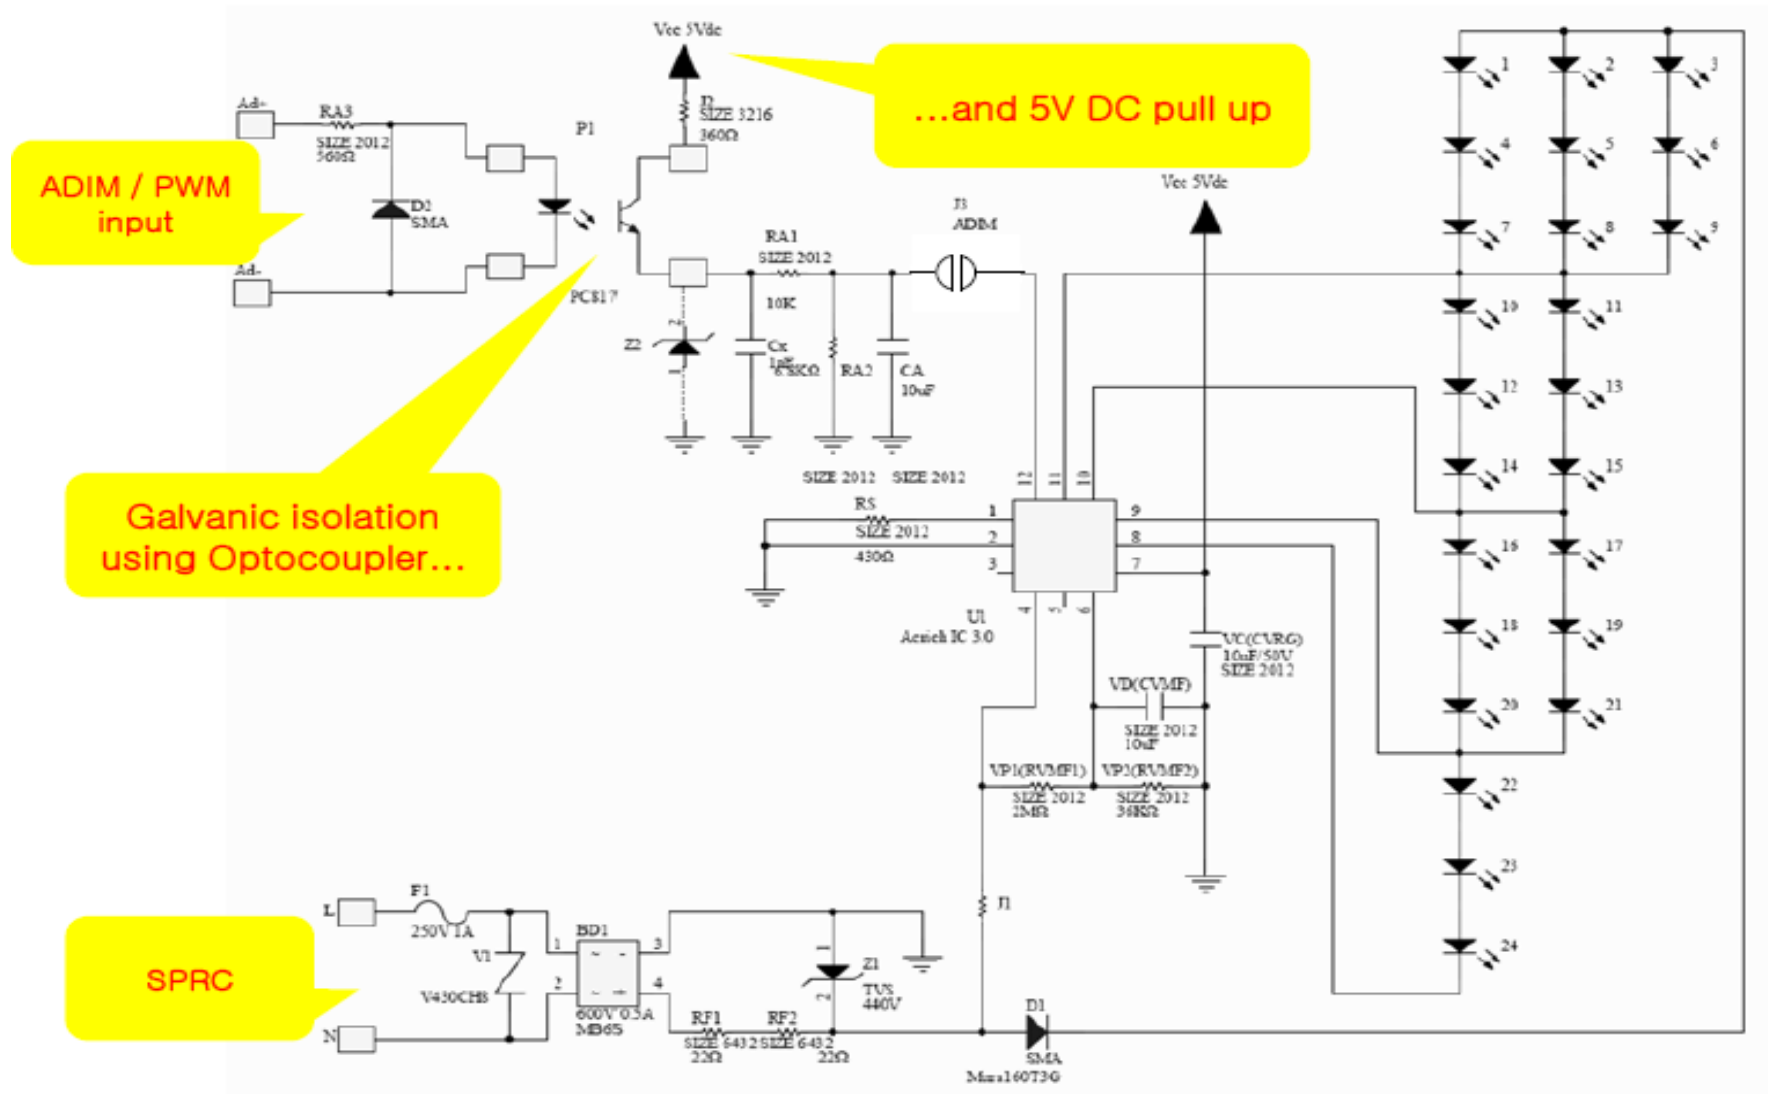

You can adjust the power of the module with **Rset** value...

...so and add a NTC thermistor in parallel to **Rset** for *Thermal Compensation!*

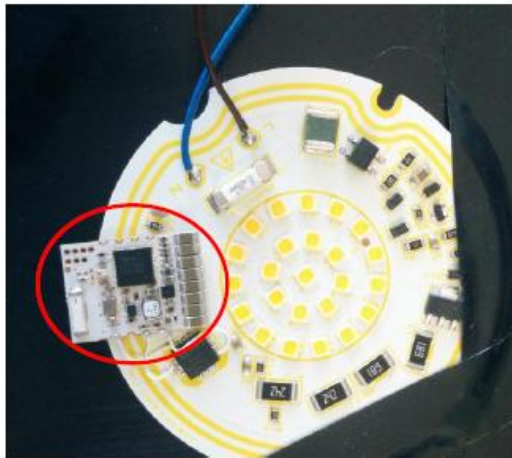

- Sensor Load
Typ. 5V & 50mA
Movement sensors, Light sensors etc.

Codemercs module
Connected to Acrich3

Why AC direct technology?

1. Small form factor compared with a SMPS for the same power
2. All on board system → LED + Driver + Controller → all in one PCB
3. Lifetime of the system is based on LED lifetime, the driver is no more the weakest part
4. Fast time to market
5. Reduced system cost
 - Less mechanical parts
 - Easy and fastest assembly
 - Cheaper driving technology
6. Compliant with international regulations
7. Less components compared with a SMPS driver
8. Compatible with an external world of controllers and smart systems
