

# Anybus: Embedded Industrial Networking Technology

## One universal solution for all embedded networking

**Kurt van Buul**

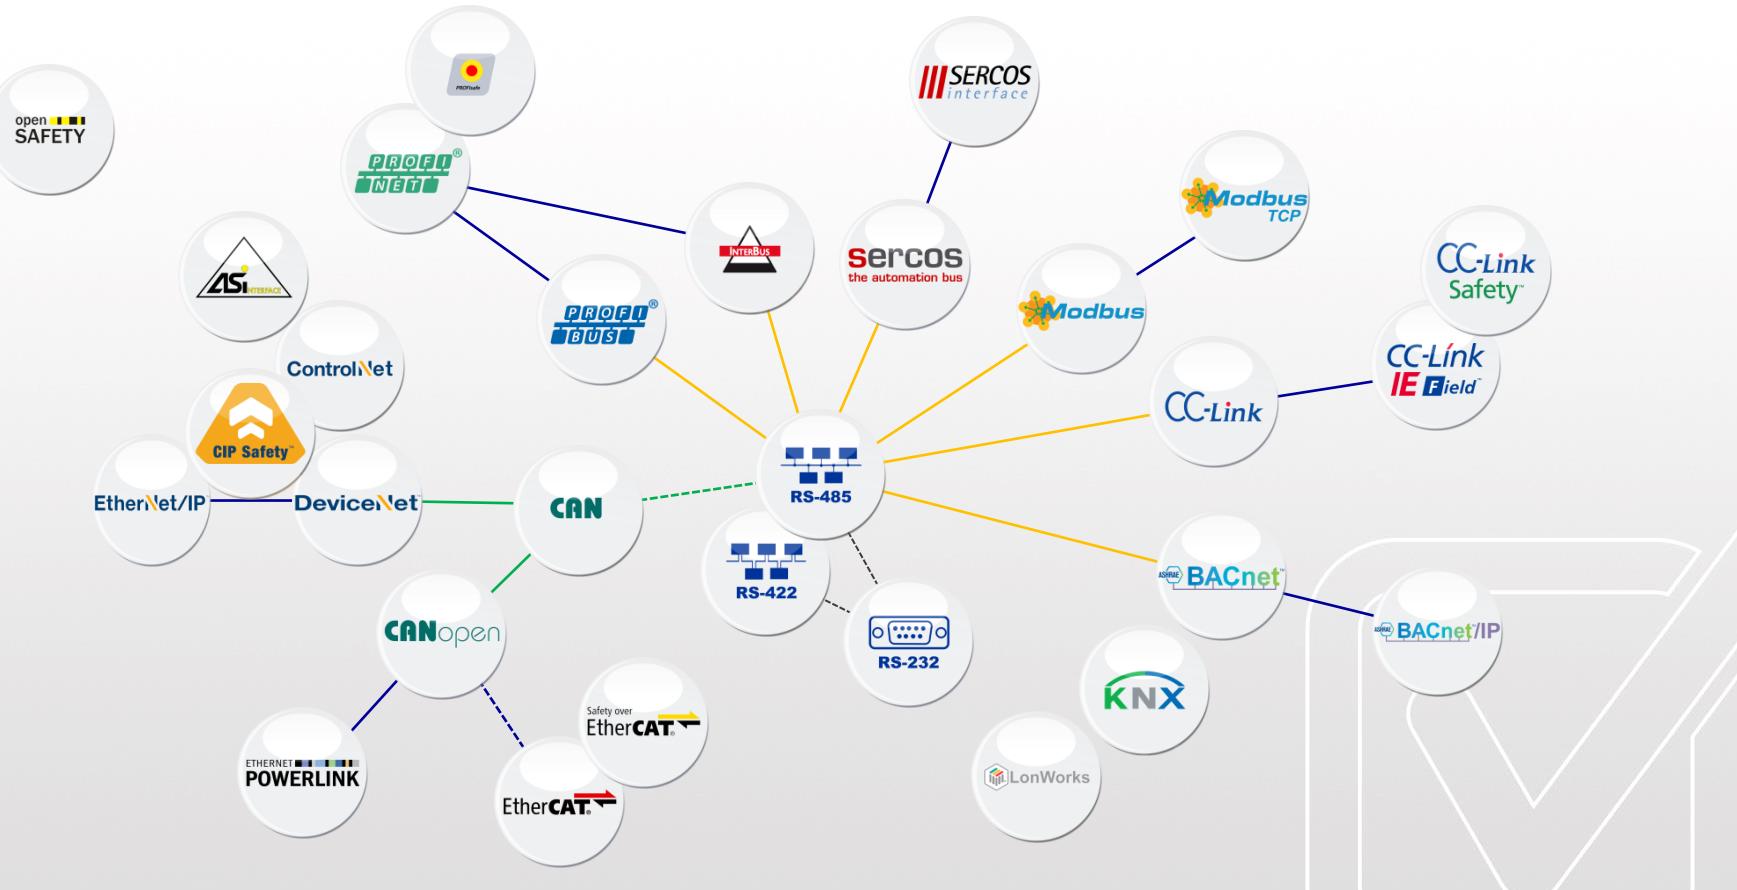

Twincomm

**Martin Falkman**

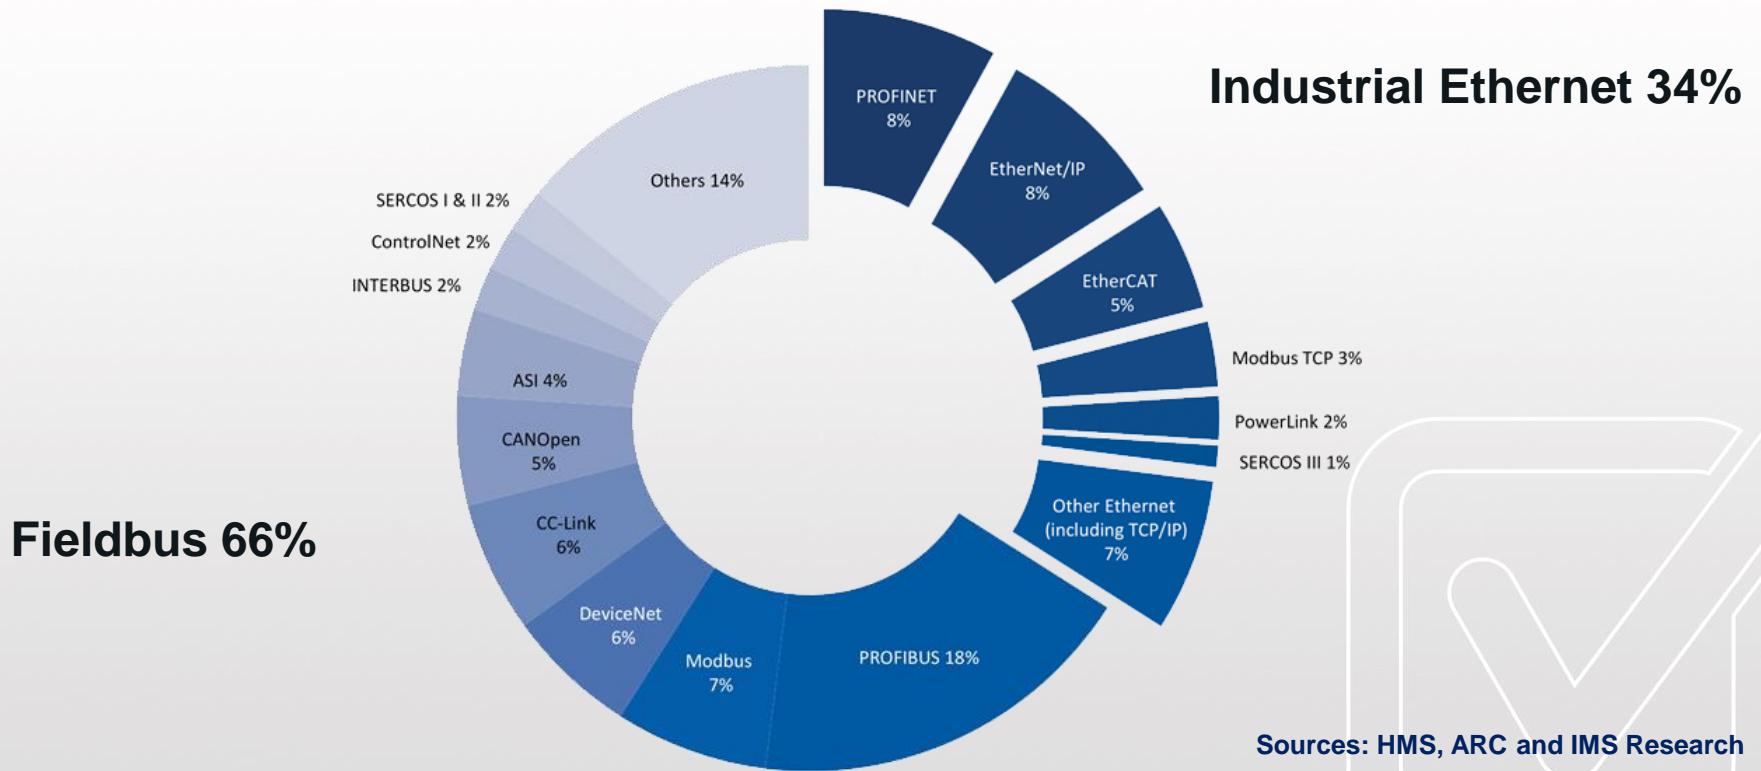

HMS

[www.twincomm.nl](http://www.twincomm.nl)

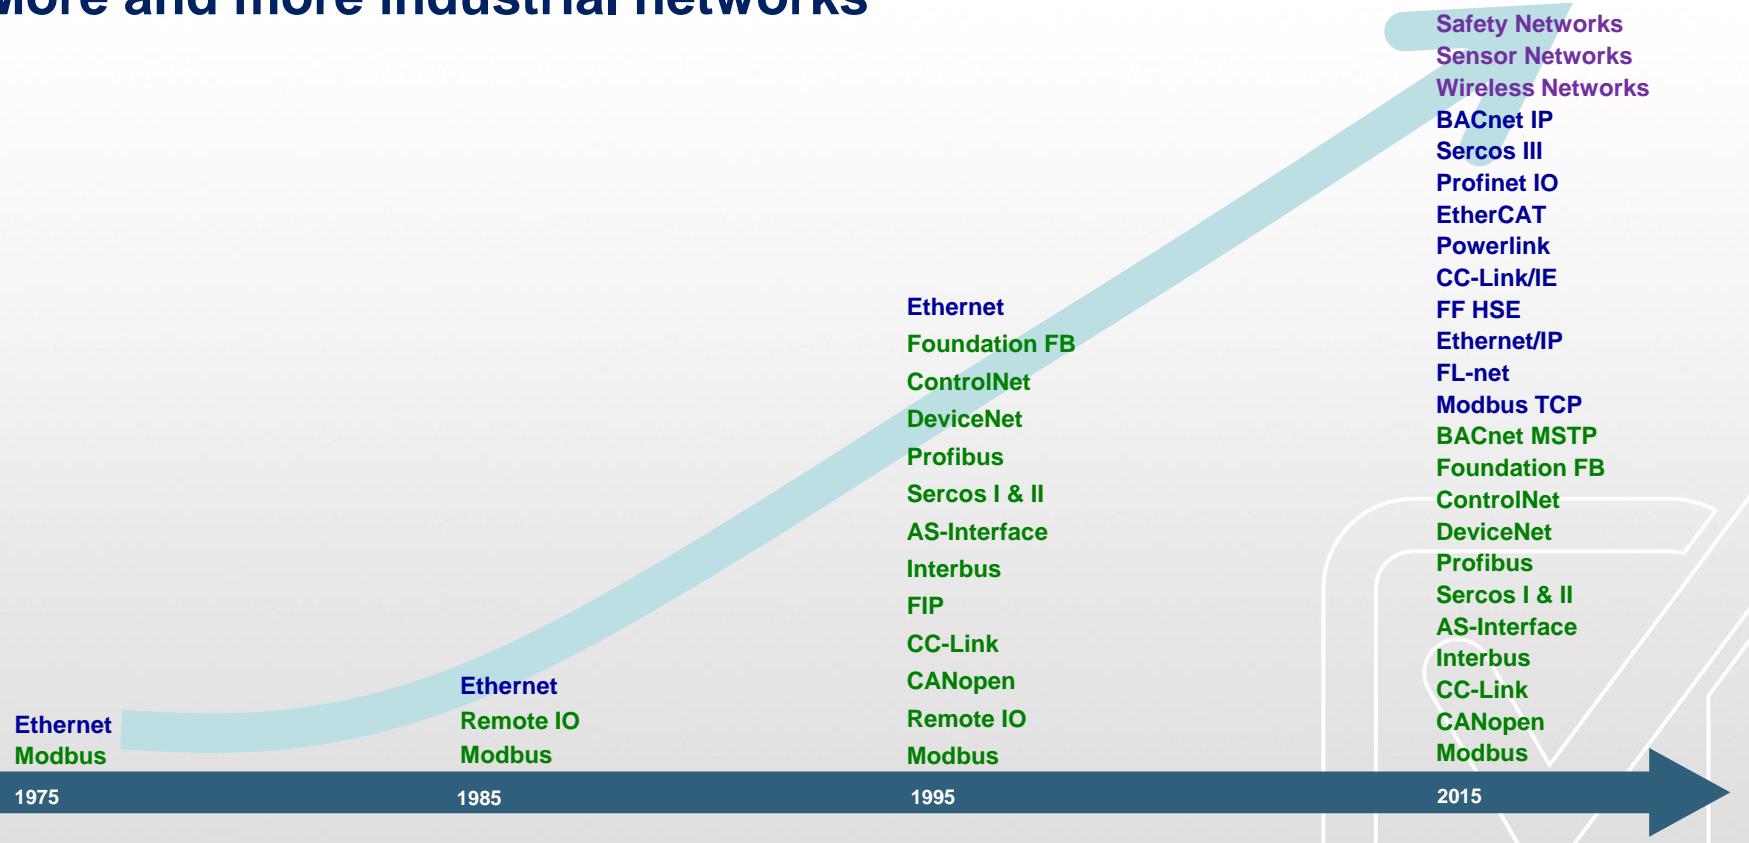

# Networking

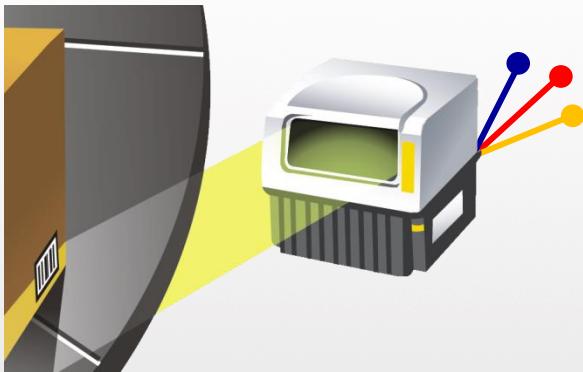

## Industrial network shares

## More and more industrial networks

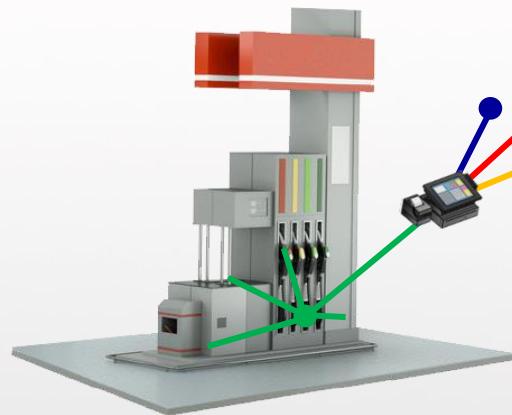

## Component

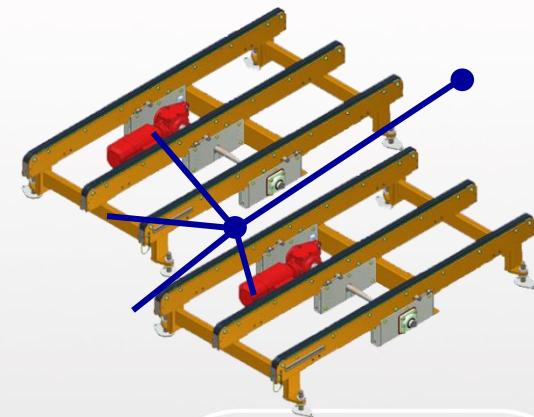

- Standardisation
- Fixed I/O data-set
- Single software variant

## System interface

- Flexible
- High-level exchange
- Single driver software

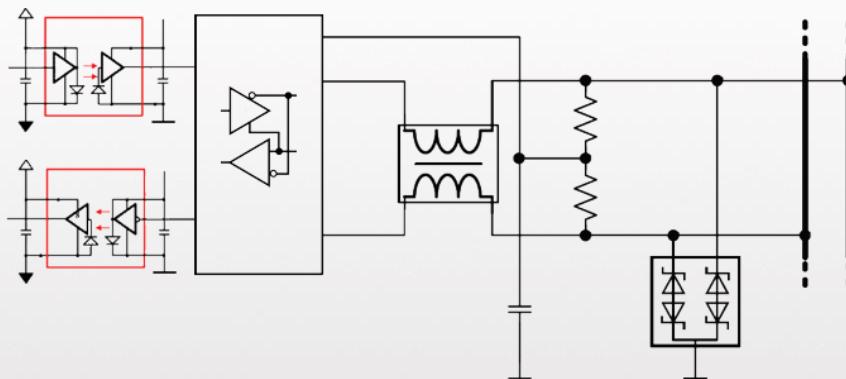

## Economical

- No-hassle
- Commands / Sensors
- Limited or no software

## Hardware

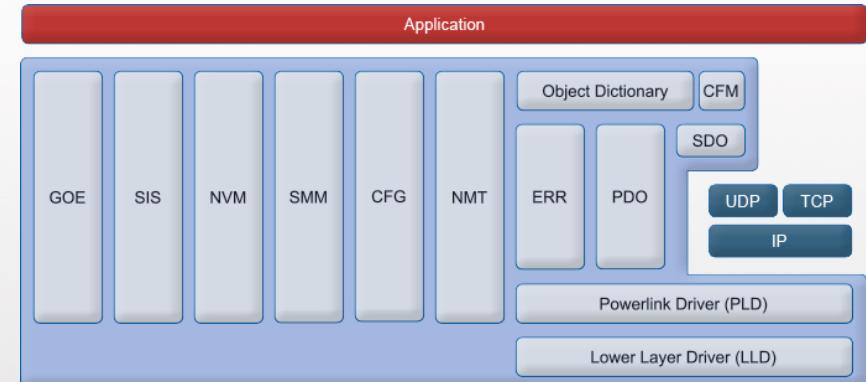

### Understanding physical communication

- Every protocol has different physics
- Protection at the right level
- Development time and effort
- Certification

## Software

### Understanding the protocol

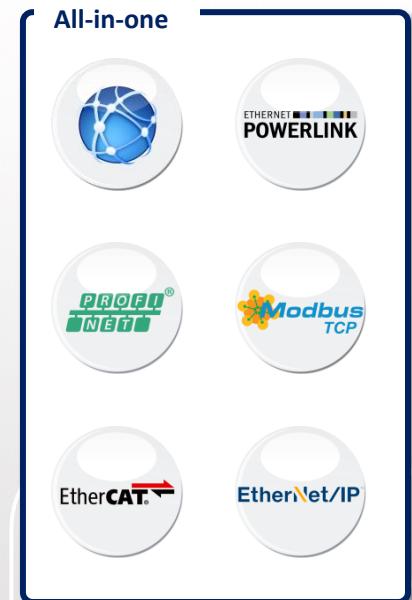

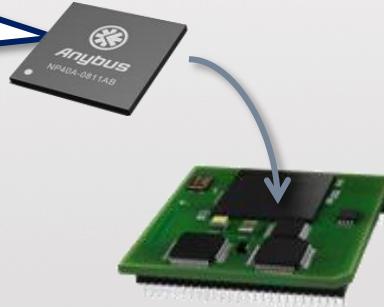

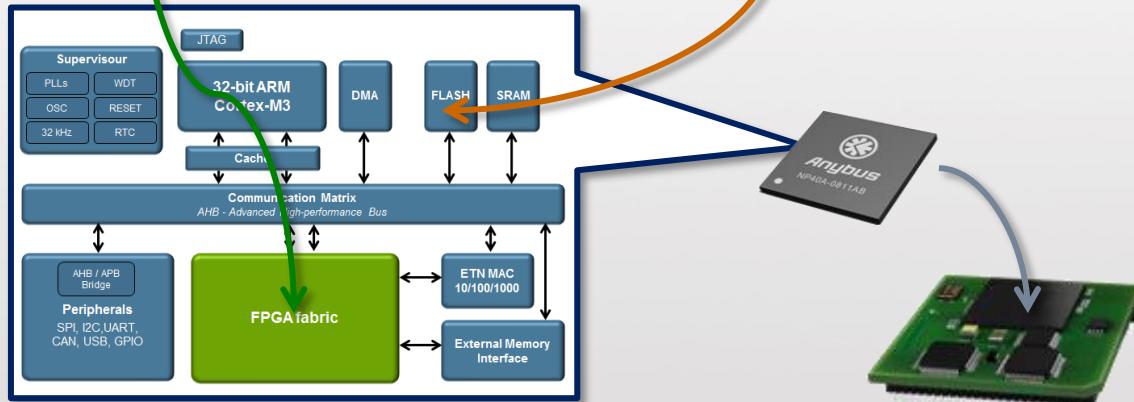

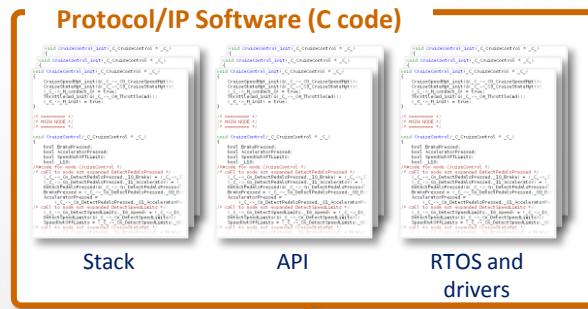

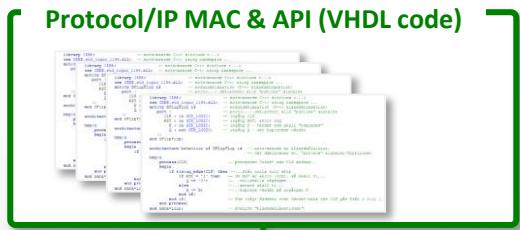

- Protocol Stack + Server, E-mail, FTP, ...
- Develop, Buy or Open Source
- Licences
- Certification

## Concept of a universal solution

# Under the hood – Network processor

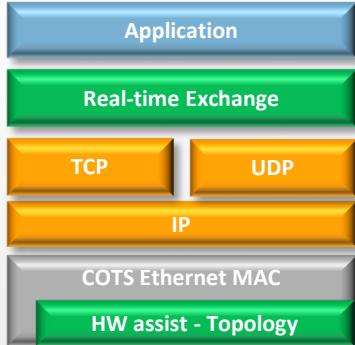

## Programmable hard- & software

# Under the hood – IE handling

## Standard TCP/IP

Architecture 1

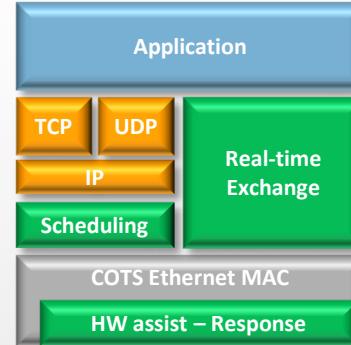

### Standard Ethernet TCP/IP

- TCP/IP
- Modbus TCP
- EtherNet/IP
- Etc.

## Software by-passing

Architecture 2

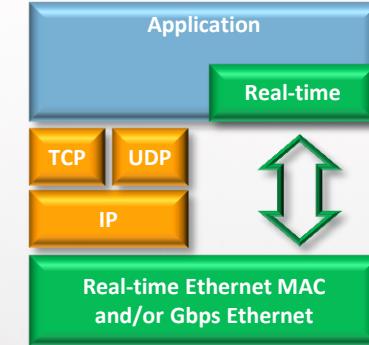

### SW by-passing or traffic scheduling

- PowerLink
- PROFINET IO (RT)
- Etc.

## Hardware assisted

Architecture 3

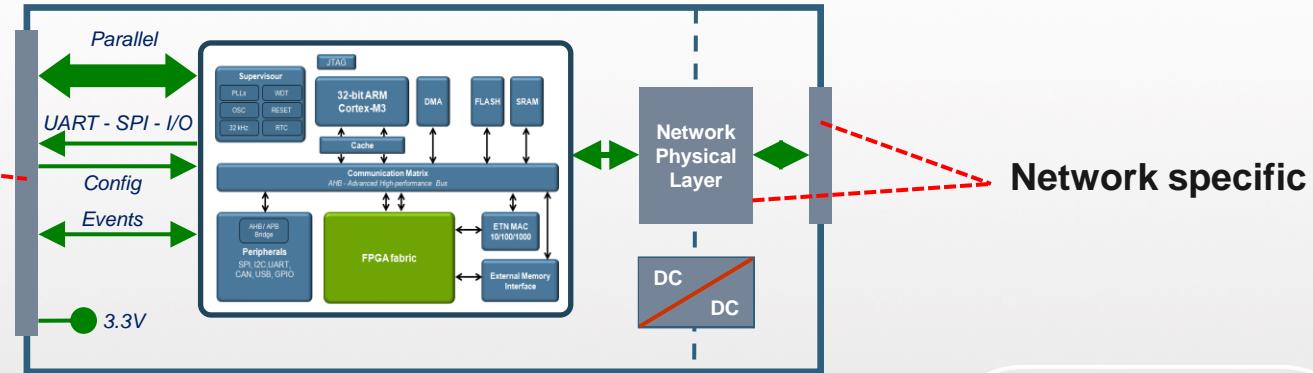

### Hardware Assisted Real-time

- PROFINET IO (IRT, DFP)
- EtherCAT
- SERCOS III
- CC-Link IE (Gbps)
- etc.

# Under the hood – Block diagram

## General hardware and application-interfacing

Common application  
Interface

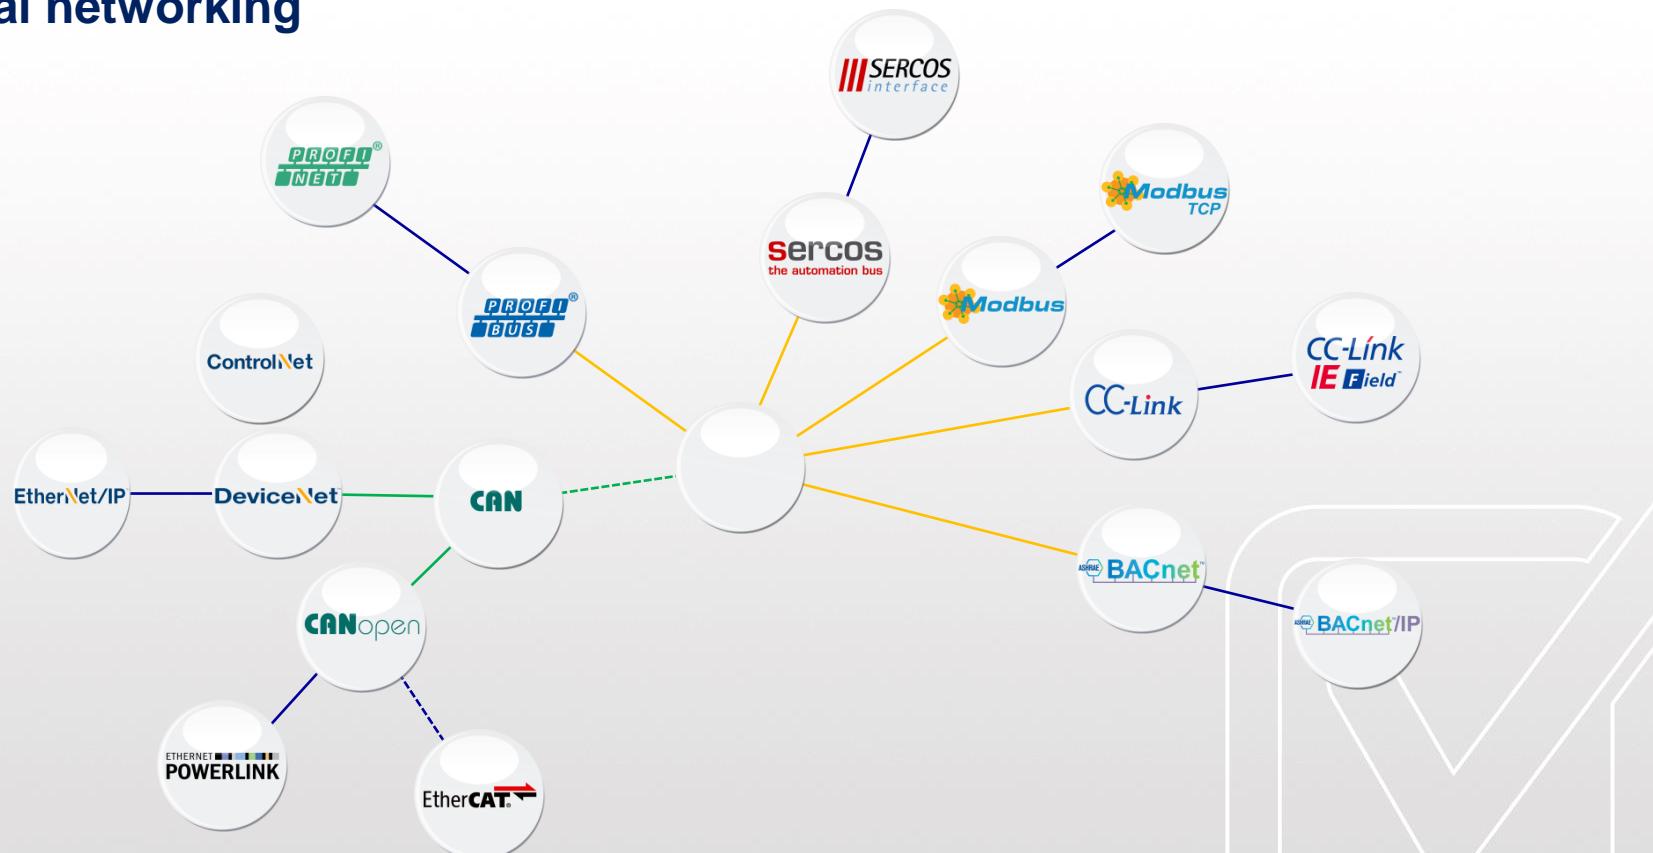

## Interfacing

- Parallel (8-/16-bit)
- SPI (20 Mhz)
- Asynchrone UART (625 kb/s)
- Stand-alone I/O (12,5 MHz)

# Common software

## General networking

## General network communication

### Acyclic data handling

- Read or Write Request/Response
- Identification
- Configuration

### Data exchange

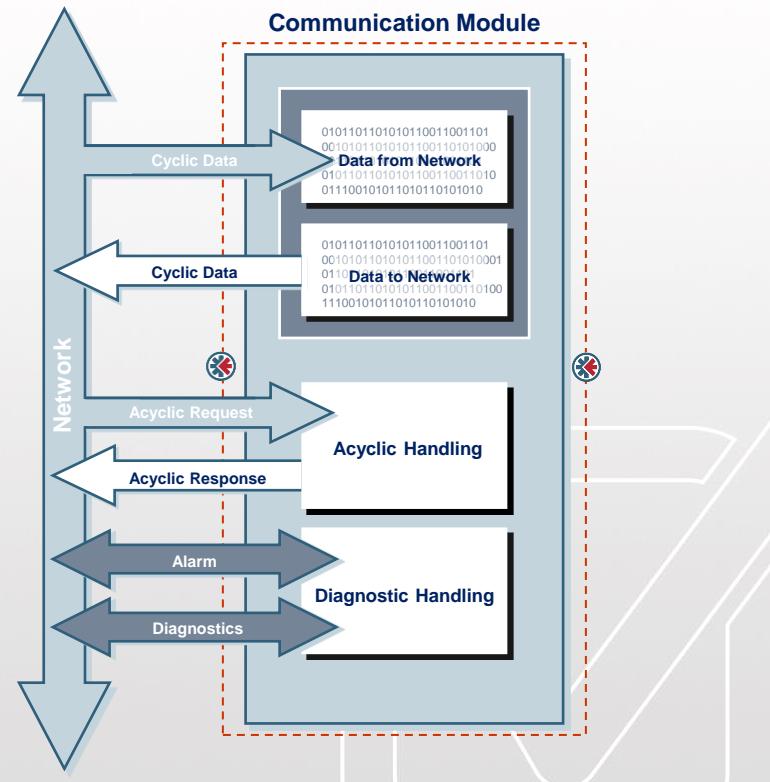

- Real-time Process Data
- Continuous updating

### Alarm

- Warnings & errors

### Diagnostics

- Status
- Heart beat

## Software interfacing process

### Data objects

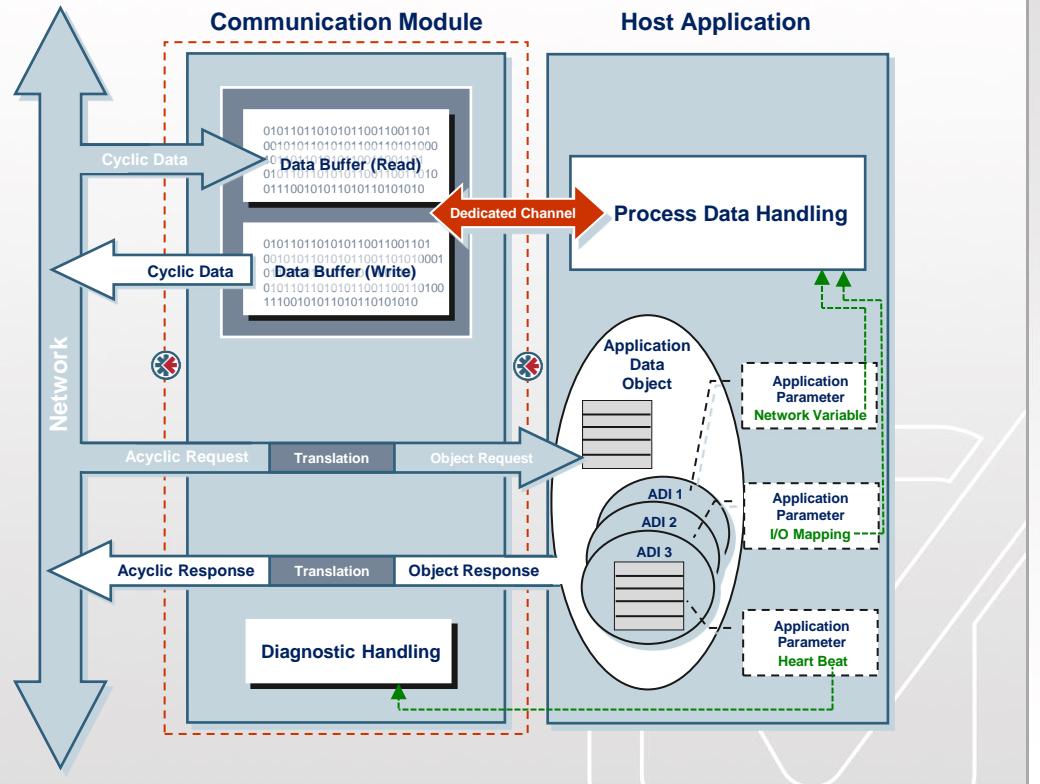

- Parameter definitions
- Network variables
- I/O-mapping
- Configuration

### Object requests (R/W)

- Passed to application
- Processed
- Response replied

### Process data

- Buffered in module
- Continuous updating

## Software Driver

### OS-Independent C-Driver

#### Application Data Object

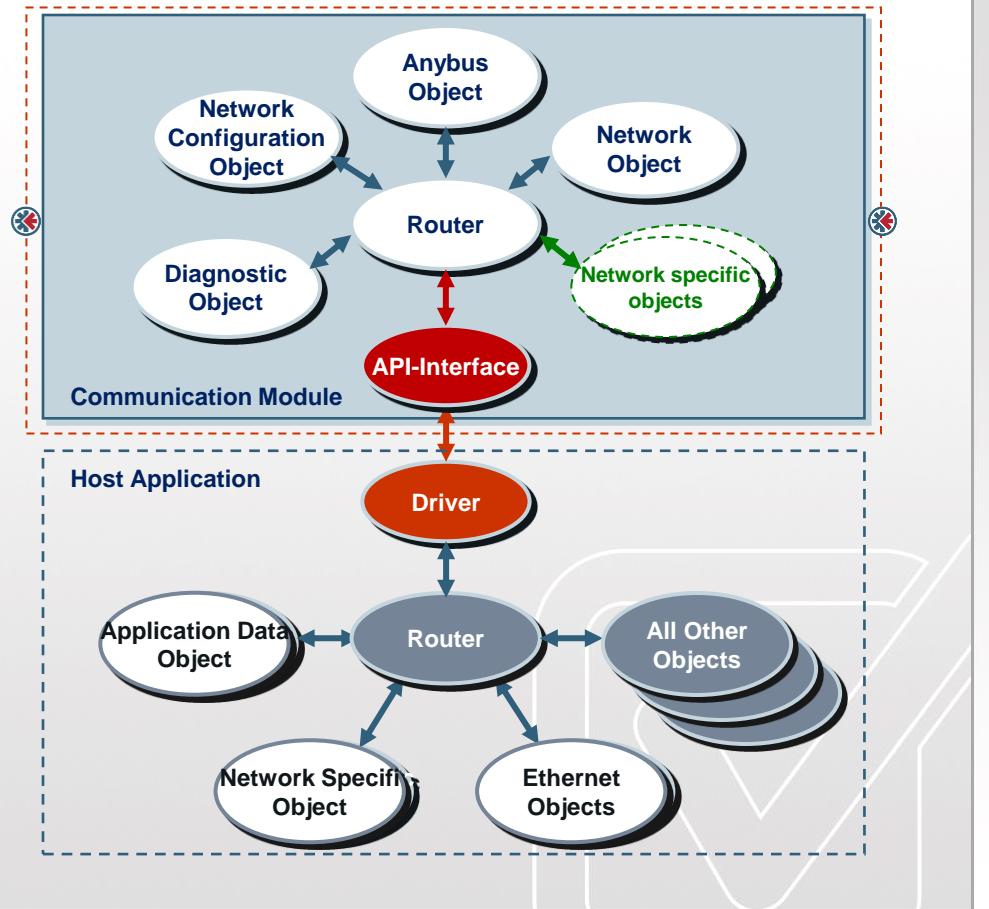

- Name, Data type, Total elements
- Value: Actual, Max, Min & Default

#### Network Specific Object

- Only when applicable
- Vendor ID, Product ID
- Specific Configuration Data

#### Ethernet Objects

- File-system & Firmware via FTP
- E-mail client & Web-browser
- Transparent socket interface

## One solution for all networks?

**Yes, but be aware!**

- All networks are different and come with different characteristics

**Network architectural characteristics**

- Data Speed, Data Size and total bandwidth
- Real-time propagation & synchronisation
- Vendor ID, Product ID & Configuration

**Network typical possibilities**

- Only available in a typical network

**Generic internet protocols**

- E-mail, WEB, FTP and Socket-interface
- Only available in TCP/IP-bases networks

**Plan on beforehand to cover these differences!**

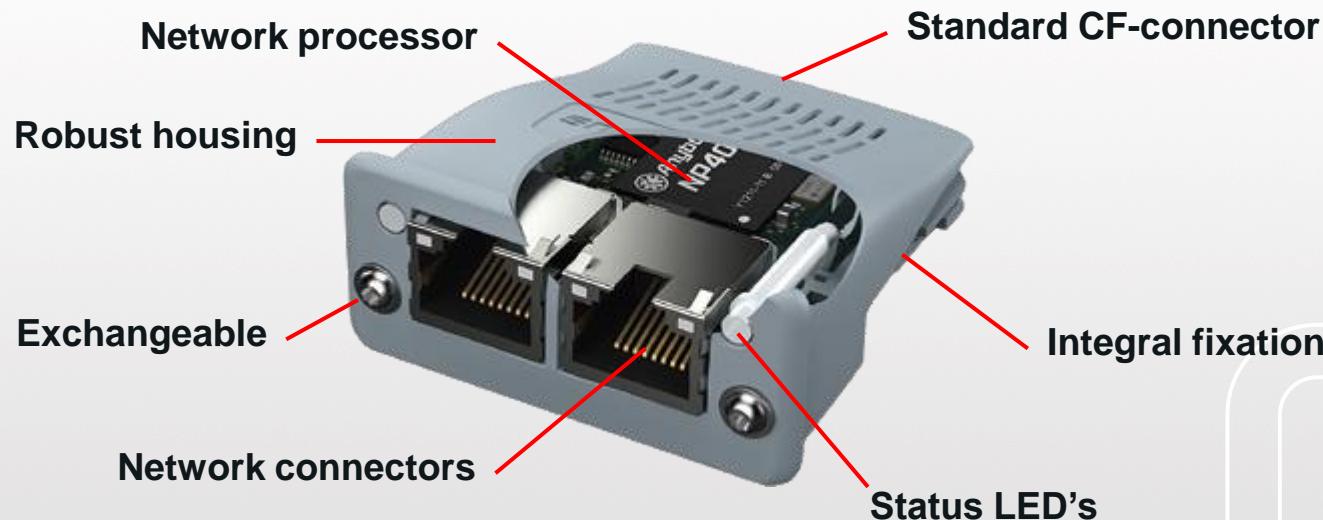

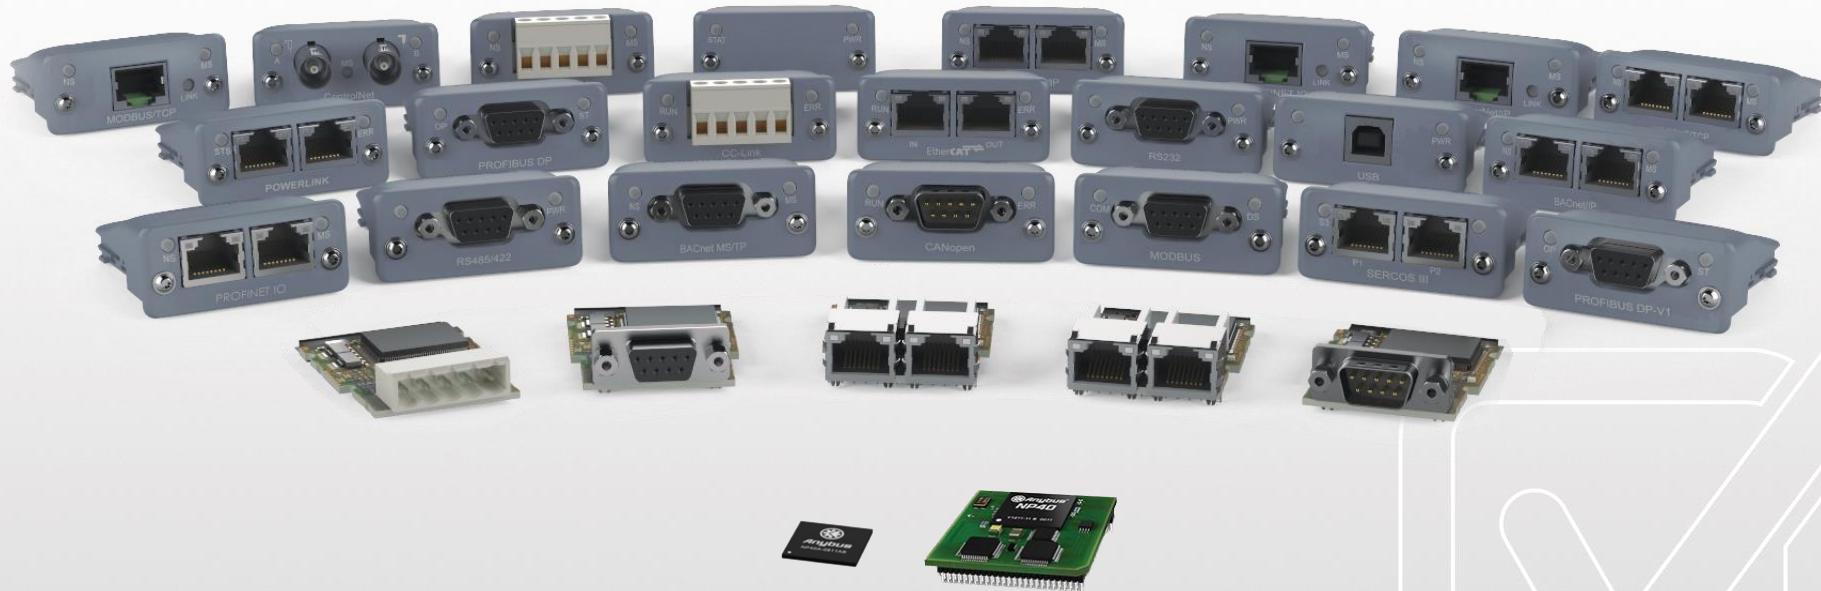

CompactCom - one solution for all networks

## Universal network interface – Standardized hard- & software

Over 20 Fieldbus & Industrial Ethernet protocols covered

## Benefits

### **Multi-network connectivity with a single development project**

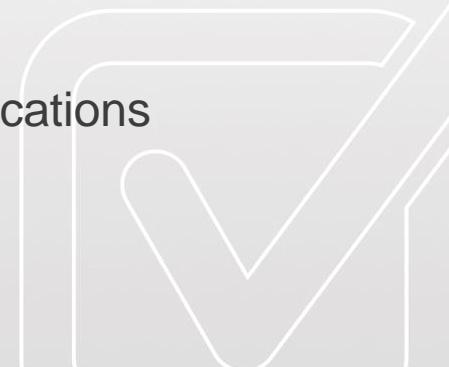

- Limiting your development efforts to an absolute minimum
- Reducing your development costs up to 70%
- Fast time-to-market

### **Proven solution**

- All modules and open frames are pre-certified
- Already millions of devices used across the world

### **Including all design resources**

- Ready to use Hard- and Software designs, notes and applications
- Complete support team

Thanks for your attention!
