

Bringing intelligence to the internet of things

Introducing the Intel® Quark™ SE Microcontroller

John Moore
Intel IoT Application Engineer
2nd Nov 2016

Legal Disclaimers

You may not use or facilitate the use of this document in connection with any infringement or other legal analysis concerning Intel products described herein. You agree to grant Intel a non-exclusive, royalty-free license to any patent claim thereafter drafted which includes subject matter disclosed herein

No license (express or implied, by estoppel or otherwise) to any intellectual property rights is granted by this document.

All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest Intel product specifications and roadmaps.

The products described may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Copies of documents which have an order number and are referenced in this document may be obtained by calling 1-800-548-4725 or by visiting: <http://www.intel.com/design/literature.htm>

Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit <http://www.intel.com/performance>.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Performance varies depending on system configuration. No computer system can be absolutely secure. Check with your system manufacturer or retailer or learn more at intel.com.

Agenda

- Intel® Quark™ MCU product line
- Intel IoT reference platform and where Quark fits
- Quark SE features including Sensor Hub and Pattern Matching Technology
- Documentation and Collateral
- Parting thoughts

Intel® Quark™ launched Products

Product Class		2015	2016	2017	2018
Intel® Quark™ Processor U-Series	Discrete ASSPs	 <p>Intel® Quark™ X1000 Series 400MHz X86 core, Low & High Speed Interfaces</p>			
	IOT MCUs Intelligent Edge		 <p>Intel® Quark SE Atlas Peak/Atlas Creek Platform</p> <p>32MHz; 80kB/384kB, I2C, UART, ADC, SPI, USB, I2S Internal Sensing Hub, Pattern Matching Engine</p>		
Intel® Quark™ Processor D-Series	IOT MCU Edge		<p>Intel® Quark™ microcontroller D1000</p> <p>32MHz, 8kB/32kB I2C, UART, ADC, SPI</p> <p>Intel® Quark microcontroller D2000</p> <p>32MHz, 8kB/32kB I2C, UART, DMA, PWM, ADC</p>		

Intel® Quark™ technology connecting your things

Edge analytics combines with a low-power processor for vertical industry innovation

Intel® Quark™ D1000

- Ultra low power, Entry Level
- 32MHz, 32-bit Microcontroller, 32kB Flash, 8kB SRAM
- Software Development Kit with sample apps and libraries
- Pre-validated comms and sensor modules

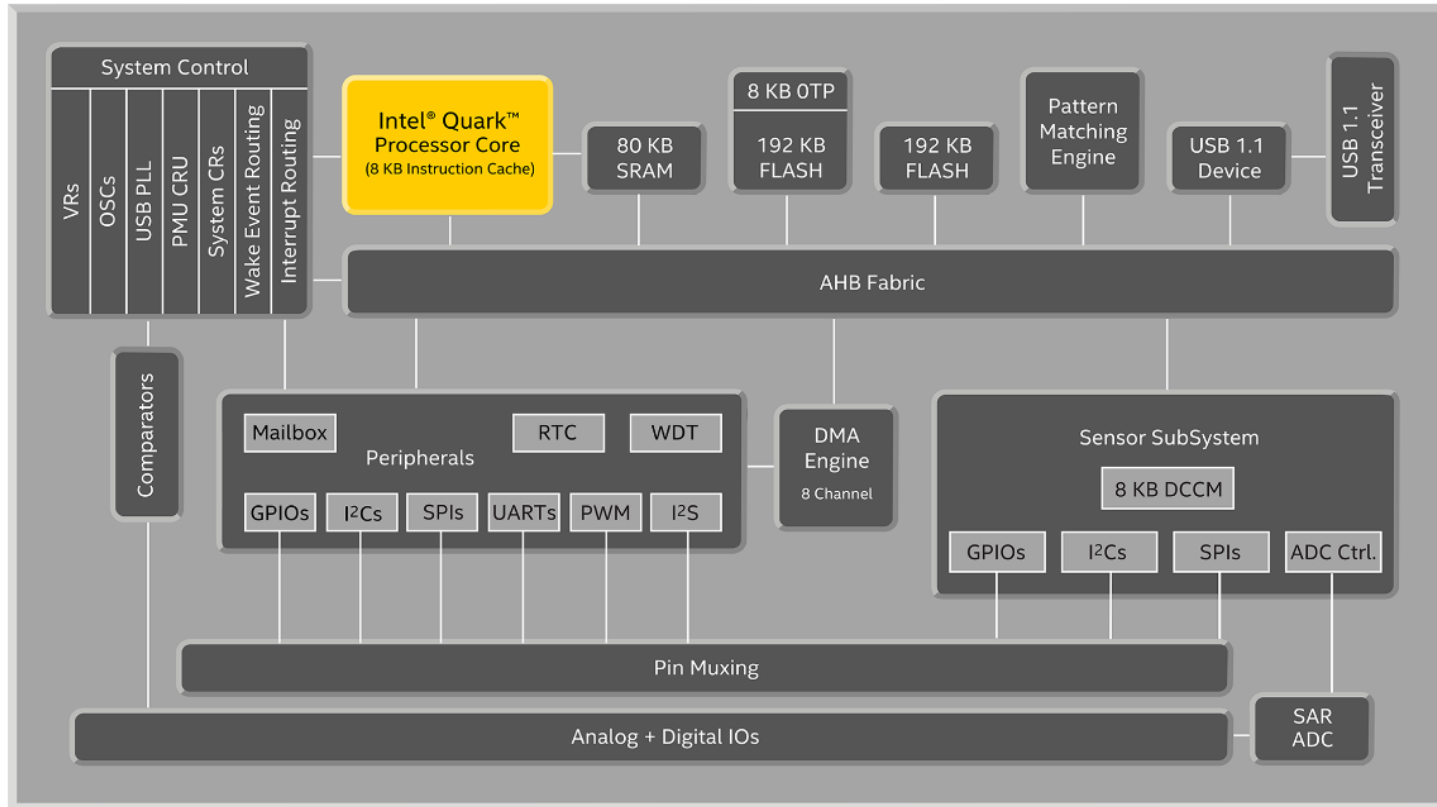

Intel® Quark™ D2000

- Ultra low power, Entry Level
- 32MHz, 32-bit x86 Microcontroller, 32kB Flash, 8kB SRAM
- Scalable Software Development Kit, with sample apps and libraries
- Pre-validated comms and sensor modules
- Full Intel x86 instruction set architecture for compatibility and scalability

Intel® Quark™ SE

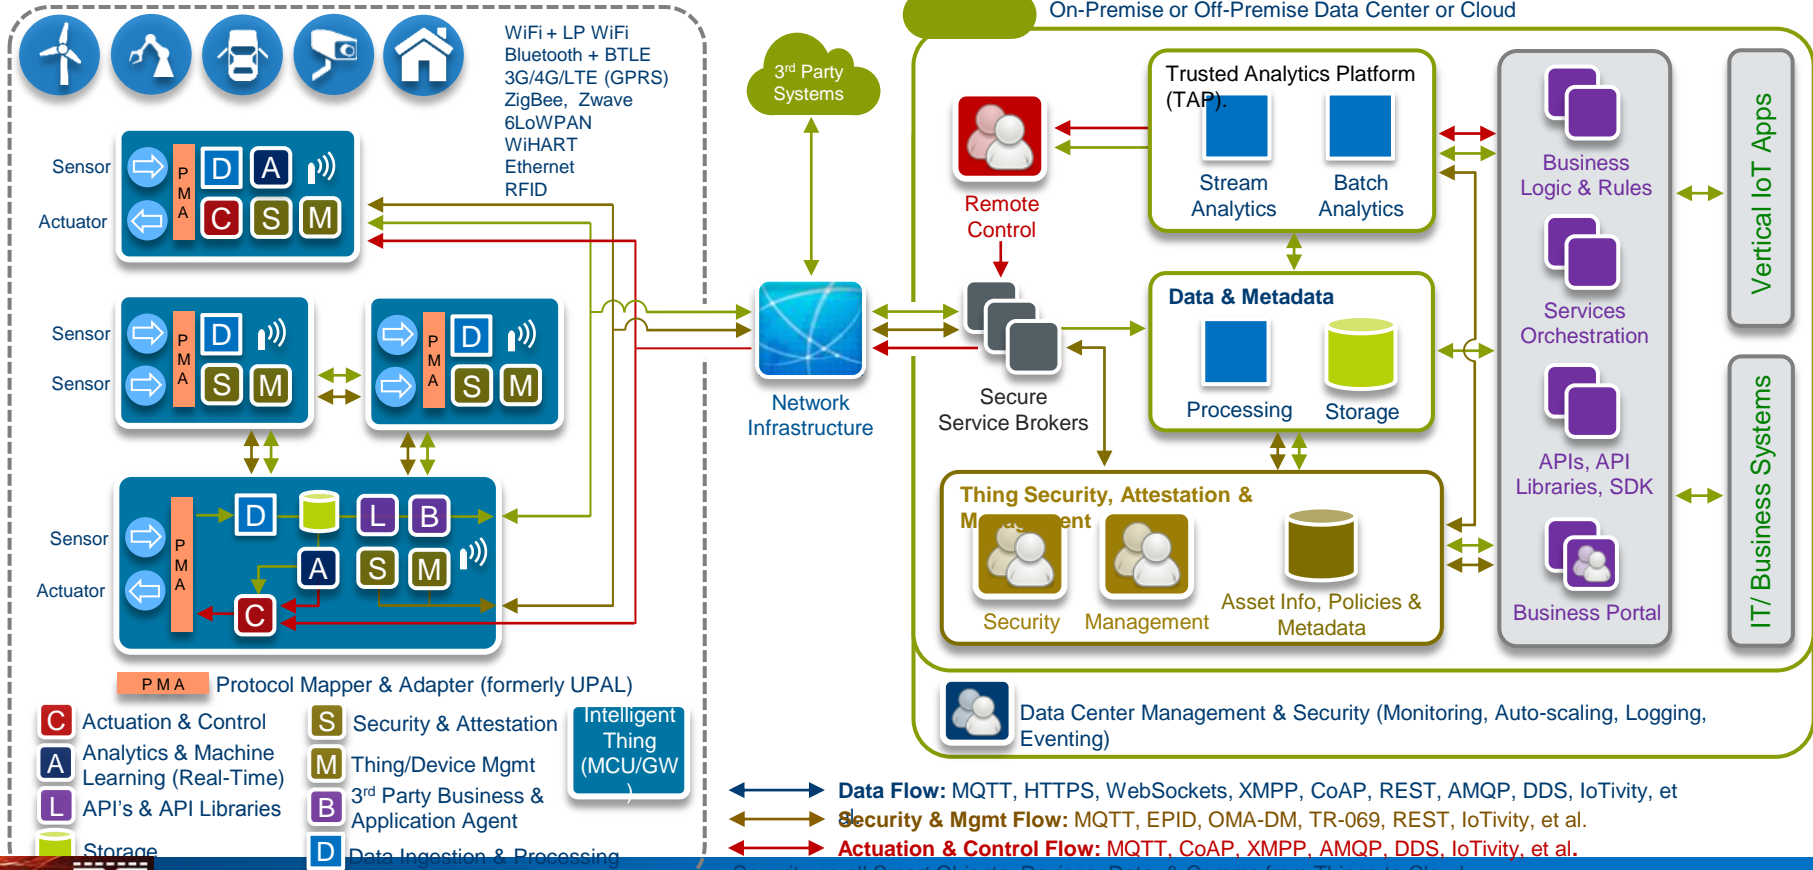

- High-efficiency power consumption
- 32MHz, 32-bit x86 Microcontroller
- 384Kb Flash, 80kB SRAM
- Scalable Software Development Kit, with sample apps and libraries
- Pre-validated comms and sensor modules
- Full Intel x86 instruction set architecture for compatibility and scalability
- Always sensing: always-listening Internal Sensor Hub
- Intelligent: Pattern Matching Technology

Logical Definition of The Intel® IoT Platform

Horizon 2: Smart and Connected Things

Intel® Quark™ SE Pattern Matching Technology

End-to-End Machine Learning Solution for Edge Analytics

Pattern-Matching Engine

- **Three** states returned by the pattern matching engine
 - Identification, Uncertain or Unknown..
- **Two** types of pattern recognition:
 - **K-Nearest Neighbour (KNN),**
 - Input consists of the Known closest training examples,
 - The entire space is mapped and with a single possible category (i.e. colour code) per position.
 - KNN always gives a response: Closest match (note that the shortest distance value can still be high)
 - **Radial basis function (RBF),**
 - Depends on the distance from the origin to correctly classify new instance
 - The space is mapped partially with certain zones being unclassified
 - The zones with multiple mapping are zones of uncertainty.

Example: Apples and Oranges

Learning Phase

Classification/Recognition phase

Nearest neighbour & Radial Basis Function classifiers: fast algorithms for the associative memory

K-NN. Maps all feature vectors as points in a multidimensional space.
(always return a trained class)

RBF clusters feature vectors and creates influence fields
(may return an “unknown” class)

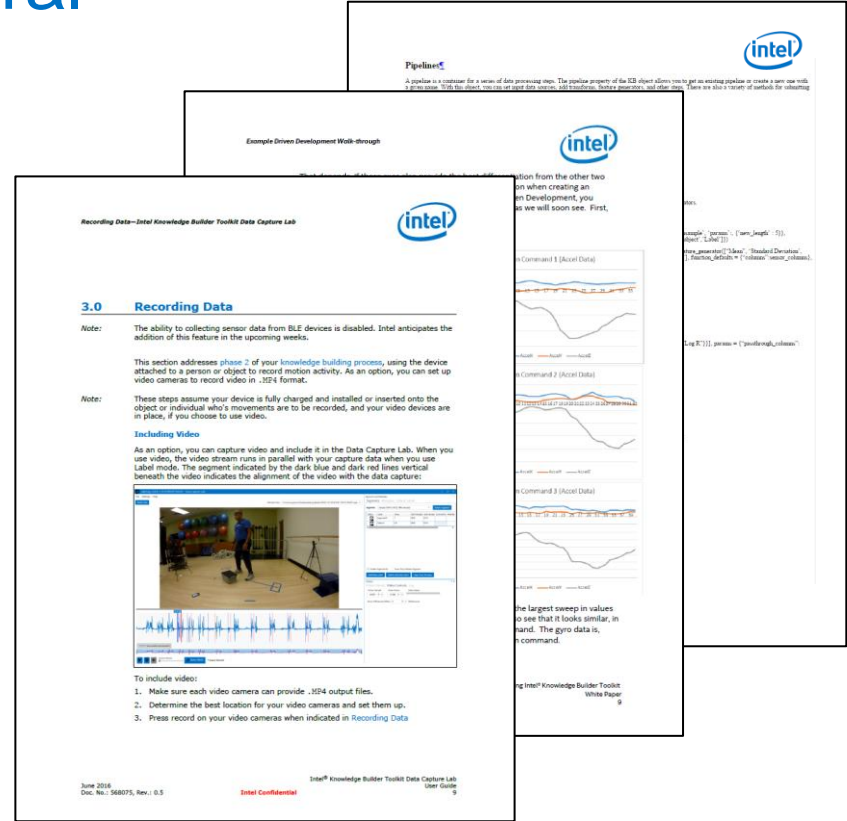

Documentation and Collateral Download

Intel® Knowledge Builder Toolkit

Whitepapers, User Guides, Templates, Sample Code...

Parting Thoughts.....

Making smart decisions takes a lot of processing, which can burn a lot of power..... **The Intel® Quark™ SE microcontroller tackles this power/ performance dilemma with an innovative pattern-matching engine and a smart sensor subsystem.**

Key questions to ask yourself about your next industrial or consumer IOT product...

- Will my product have basic analytics or advanced analytics?
- Is my analytics development process efficient and affordable?
- Can my product easily adapt to customer demands?

Intel® Knowledge Builder Toolkit Enables Efficient Development of Advanced Pattern Matching Analytics For Cutting Edge IOT Products

Intel® IoT Platform

Secure, Scalable, Interoperable

The Intel® IoT Platform includes an end-to-end reference architecture and a portfolio of products from Intel and its ecosystem, that work with third-party solutions, to provide a foundation for seamlessly and securely connecting devices, delivering trusted data to the cloud, and delivering value through analytics.

SMART AND CONNECTED THINGS

Sense, filter, process, analyze, and actuate, while securing and managing machines and data.

THINGS

GATEWAYS

DEVELOPER KITS, TOOLS & SDKs

Rapidly move to prototyping, piloting, and producing with developer kits, tools, and SDKs.

CLOUD MANAGEMENT

UNLOCKING THE VALUE OF DATA

Process, store, and analyze data globally, perform complex analytics on large datasets, secure and manage millions of endpoints, and manage policies, metadata, and networks.

DATA CENTER & STORAGE

APIs AND THIRD-PARTY CLOUD CONNECTIONS

VISUALIZE DATA AND MONETIZE INSIGHT

Provide actionable information and create new services, while automating operations.

CONNECTING THE UNCONNECTED

Capture, filter, process, and store data, connect securely to legacy infrastructure, and perform analytics at the edge.

DATA AND DEVICE MANAGEMENT

Supports onboarding, monitoring, diagnostics, and remote control of devices.

END-TO-END SECURITY

Secure hardware, software, and data, as well as device and policy management. Detect threats and safeguard scalable compute.
