

# AAEON IIoT solutions

## The challenges of Designing a Gateway Platform for the Industrial Internet of Things

# ASUS® Group

**A4EON®**  
an ASUS assoc. co.

# AAEON Corporate

**Company Name:** AAEON Technology Inc.

**Founded:** 1992 (Acquired by ASUS in 2011)

**Employees:** 850+

**Location:** Taipei, Taiwan

## Corporate Headquarters

# AAEON Worldwide Offices

Headquartered in Taipei, Taiwan, AAEON now has 15 locations worldwide to serve the needs of our global partners

# AAEON Product Divisions

End Nodes,  
Devices

# IOT

The connection of devices (the Things) through the internet so they can collect and share data without human assistance.

IoT devices range from smart thermostats to vehicle systems to biochip transponders on farm animals. Even people can be outfitted with sensors connected to the internet.

IoT “things” aren’t just dumb devices that can be turned on and off remotely, they:

- are “smart” devices with their own local logic and processing
- have protocols for exchanging information with each other
- send and receive information and commands over a network (including the internet)

# IIOT

IIoT is the use of IoT technologies for industrial purposes – from gas pumps to HVAC systems to machinery on the factory floor.

Think of sensors (pressure, temperature, vibration, flow, and many more), that are already collecting data, but now that data can be combined with data from other systems and collected, analyzed, and exchanged data in new ways.

- Operational efficiency, maintenance
- Safety -> Remove humans from many environments (reducing risks)
- Productivity
- Monitoring and control
- Reliability
- Performance diagnostics
- Allows machines to act autonomously

Existing bus and devices - RETROFIT

# Challenges IIoT

One of the biggest is figuring out how all the existing automated devices can be retrofitted and connected to use industrial IoT.

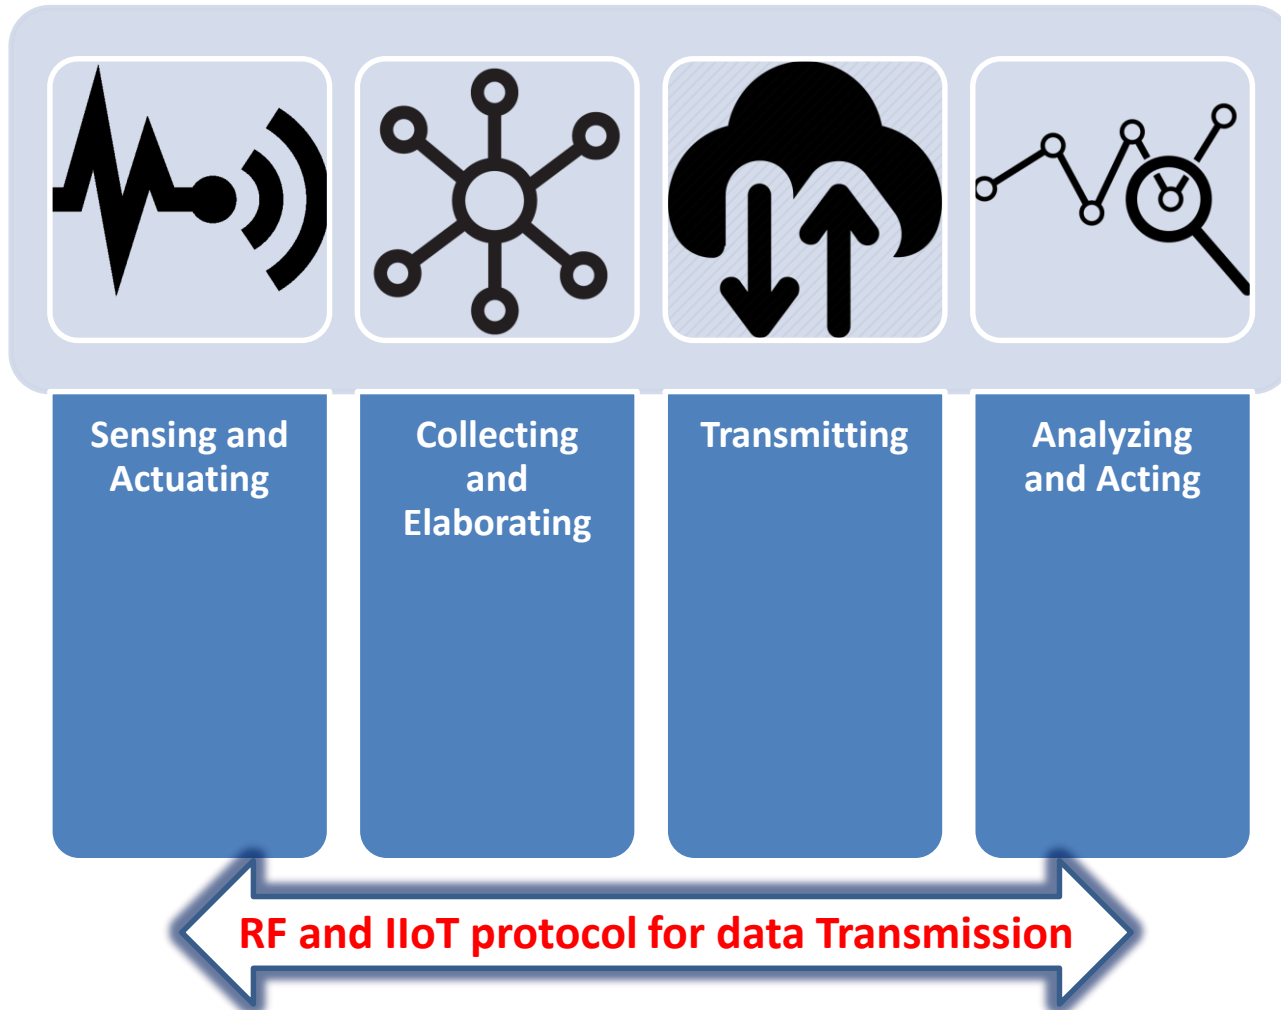

Existing automated processes use proprietary protocols, different architectures, and have limited networking ability.

They tend to be isolated islands of technology.

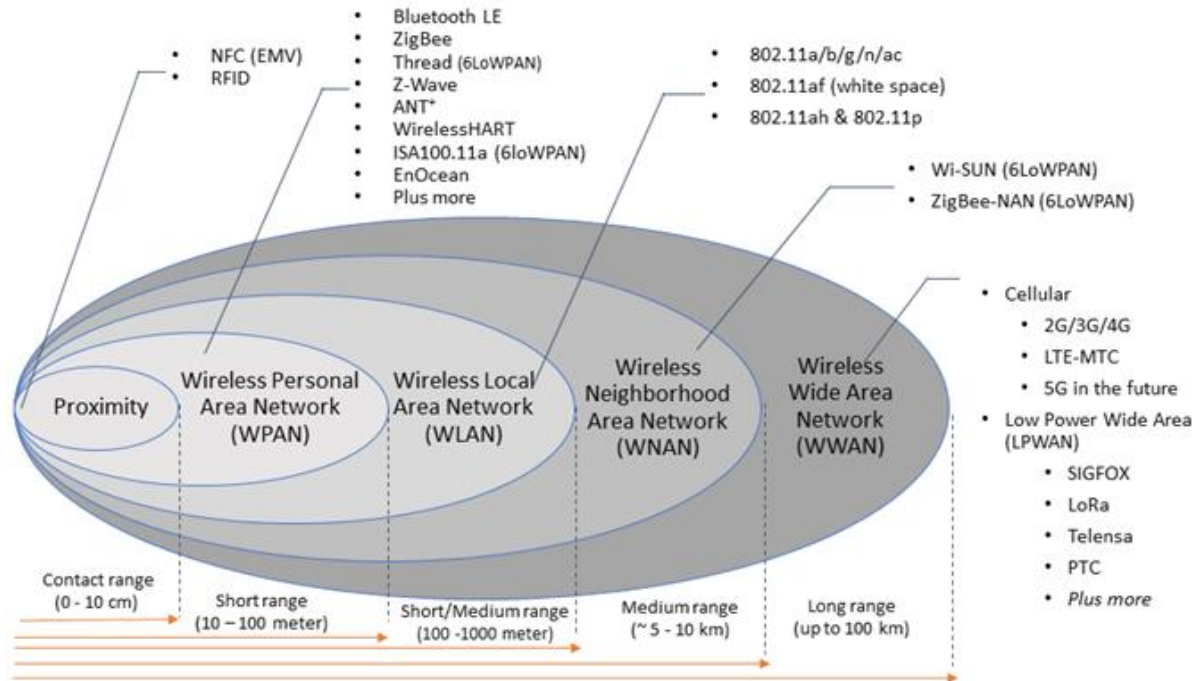

# Main challenges for a standard IIoT GW

- to easy retrofit existing equipment's
- to be enough flexible to offer different wireless interfaces required by several applications
- To fit with different IIoT SW platforms

# Breakdown by main elements

# IIoT communication networks variety

Choice Influenced by distance, environment, application, cost

# Strategy's elements

## Connectivity solution

Short Range, Long Range; Low speed/data rate, High speed/data rate

## Application Environment

Indoor, Outdoor

## System Integration

HW, SW, Data

## Development stage

Prototyping, Market-in, Serial production

Vertical market

# Application story

# A4EON IIoT solutions

InVMA case history

# Application

- Market: smart energy
- Application: retrofit of energy generator fueled by vegetable oil
- Targets: provide remote control and predictive maintenance
- Location: UK privately managed schools

# HW Solution applied

- IIoT Gateway able to:
  - dialog with the Energy Generator's PLC via Modbus (added converter RS-485 to Modbus)
  - send up to the cloud via 3G relevant informations (machine status, alarms, etc...)
  - Execute actuations
- Installation environment: industrial electrical cabinet

# SW Solution applied

Info to come from InVMA

- Onsite Controllable fuel level, Oil pressure and Coolant Temperature
- Remote management and actuations for the Energy Generator
- Predictive Maintenance

## Industrial Automation LE Gateway

CPU	Intel® Atom™ x5-Z8350 Quad Core Processor
System Memory	DDR3L, Memory Down, Non-ECC, 2GB, 1600Mhz
Storage	1 x eMMC 32GB Onboard
Multimedia IO	1 x HDMI
USB Ports	1 x USB 3.0 OTG 4x USB 2.0
Network Interface	1 x 1GbE LAN
Expansions	WiFi IEEE 802.11 a/b/g/n or b/g/n (optional) Bluetooth 4.0 (optional) 3G modem (optional)
Temperature range	0-50°C
IOs	1x Serial port RS-232/485 configurable by jumper 1x Analog input 3x Digital I/O
Power input	5VDC
OS Support	Windows 10, Ubilinux / Ubuntu Linux / Yocto Linux Android 6.
Certifications	CE/FCC Class A
Mounting	Desktop mount VESA mount DIN Rail

Availability: end of October

Analog input

RS-232/485

# InVMA solution: Assett Minder

### Indoor Ethernet Gateway

Basic entry level solution  
with powerful Quad Core Intel ATOM

The AAEON Ethernet Gateway is a basic edge computing solution powered by an Intel Quad Core ATOM processor. It offers Gigabit Ethernet connectivity and USB ports for data collecting.

### LoRa Gateway & Network Server

Indoor Industrial LoRa Certified Gateway and Network Server

The AAEON Industrial Indoor LoRa™ Gateway and Network Server is

### Outdoor Industrial Gateway

IP68 Rugged Industrial Gateway  
for outdoor applications

This Industrial IoT gateway is aimed to help the transition from legacy to

### Automation 3G Gateway

Industrial automation IoT Gateway  
with 3G, Serial Port and Analog I/O
