FUTURE ELECTRONICS

YOUR TRUSTED PARTNER IN DESIGN SUPPORT

Strong Engineering Power • Technically Capable Across The System • Trained, Certified and Equipped • Global Suppliers Contacts and Ecosystem

SENSING & OPTOELECTRONICS

WIRELESS CONNECTIVITY

ANALOG & POWER

CYBERSECURITY

EMBEDDED

INTERCONNECT & EMECH

PROGRAMMABLE LOGIC

MOTION & SAFETY

PASSIVES

LIGHTING

Agenda

- What is AI?
- Hardware requirements for the MPU
- Software needs and typical process
- What AI could offer into your application
- Available SoM Hardware

AI

AI is the data interpretations to extract data signatures

The challenge :

- The technology progress gives us a huge quantity of data to manipulate

High speed Data conversion, Image resolution, 3D sensors, Storage capacity, Technology shrink, the communication BW
- It requires CPU DMIPS to extract deep signatures by using matrix data manipulation in Real time
- It requires to develop Models and have Dataset to fine tune and validate a Model

AI

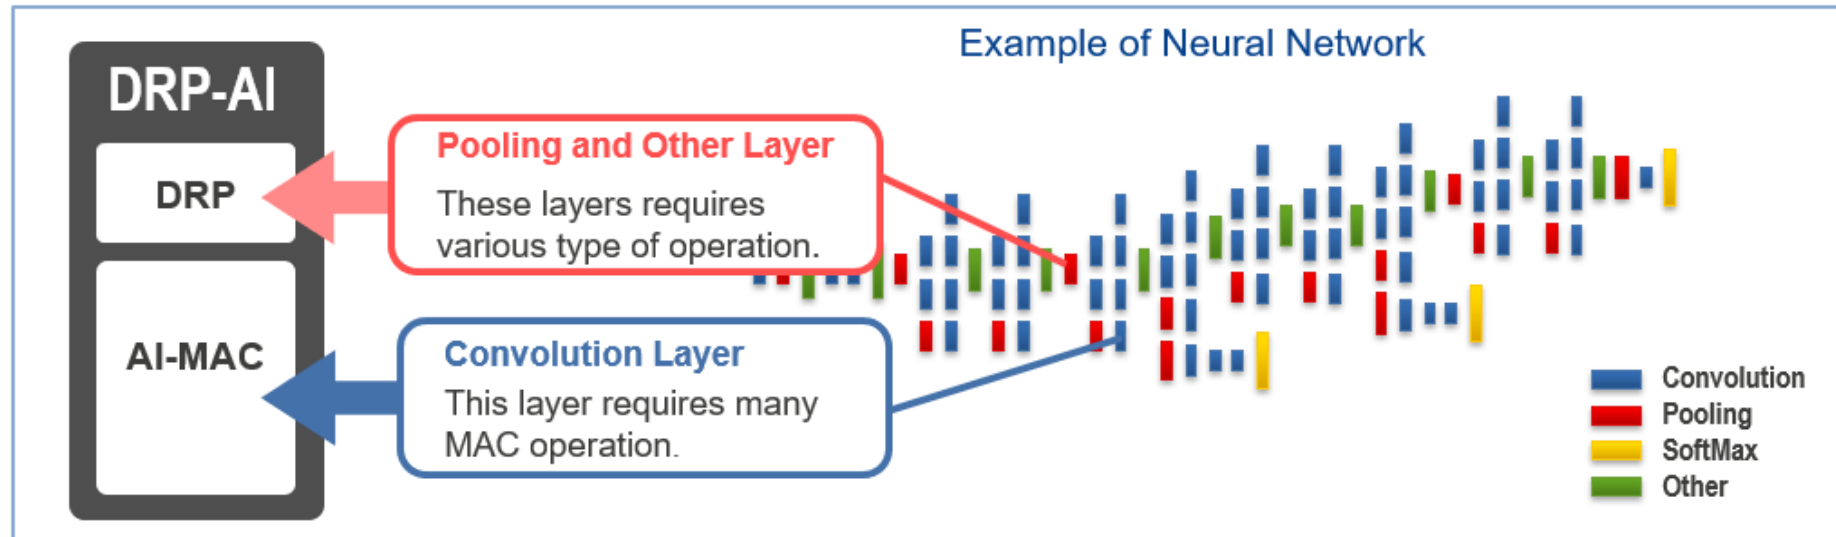

- A model of data computation represent Millions of operations to be executed shortly for fast response time
- The operator types are sortable by few type

Example of Neural Network

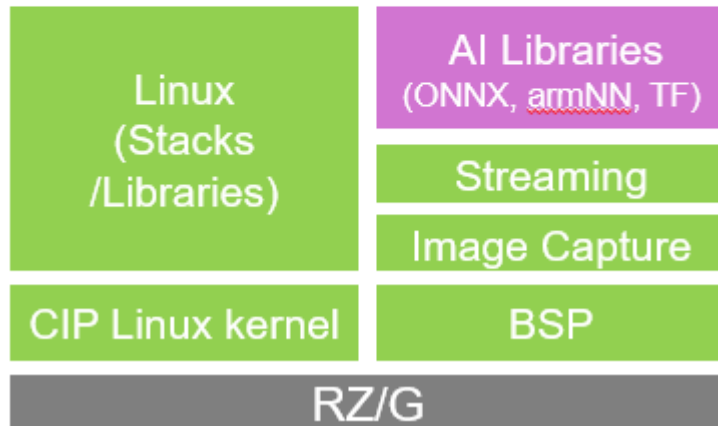

The Silicon Needs for AI computation

- You need Neuronal Hardware, FPU or GPU
- Critical points are the performance, Latency and Q of Data, Number of Subjects, Models used ...
- DRP-AI is a dedicated Neuronal hardware
- It realizes high speed processing, and low power consumption
- DRP-AI optimized for AI inference

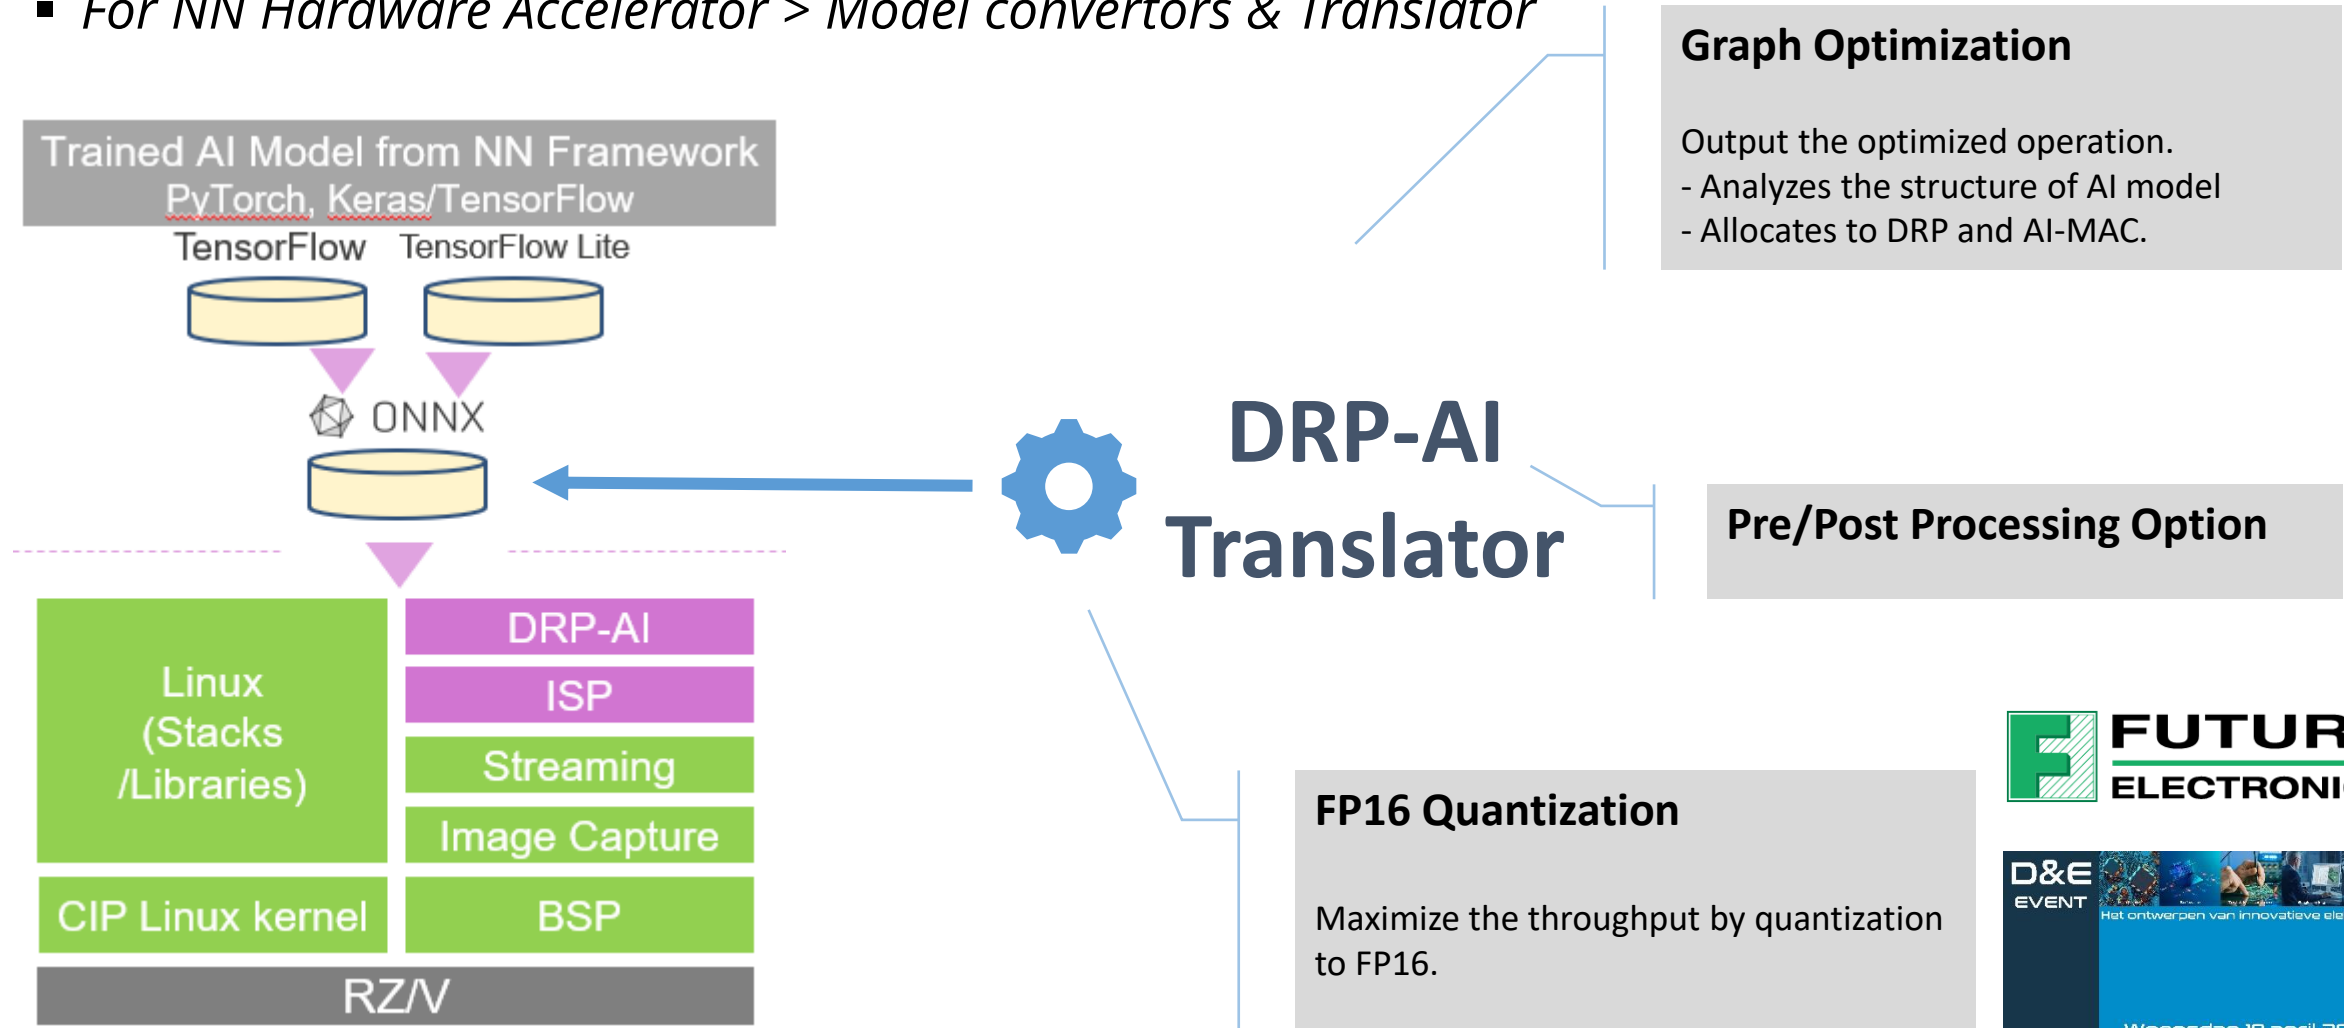

The Software Needs - FPU

- *For FPU Case > AI Linux Library module*

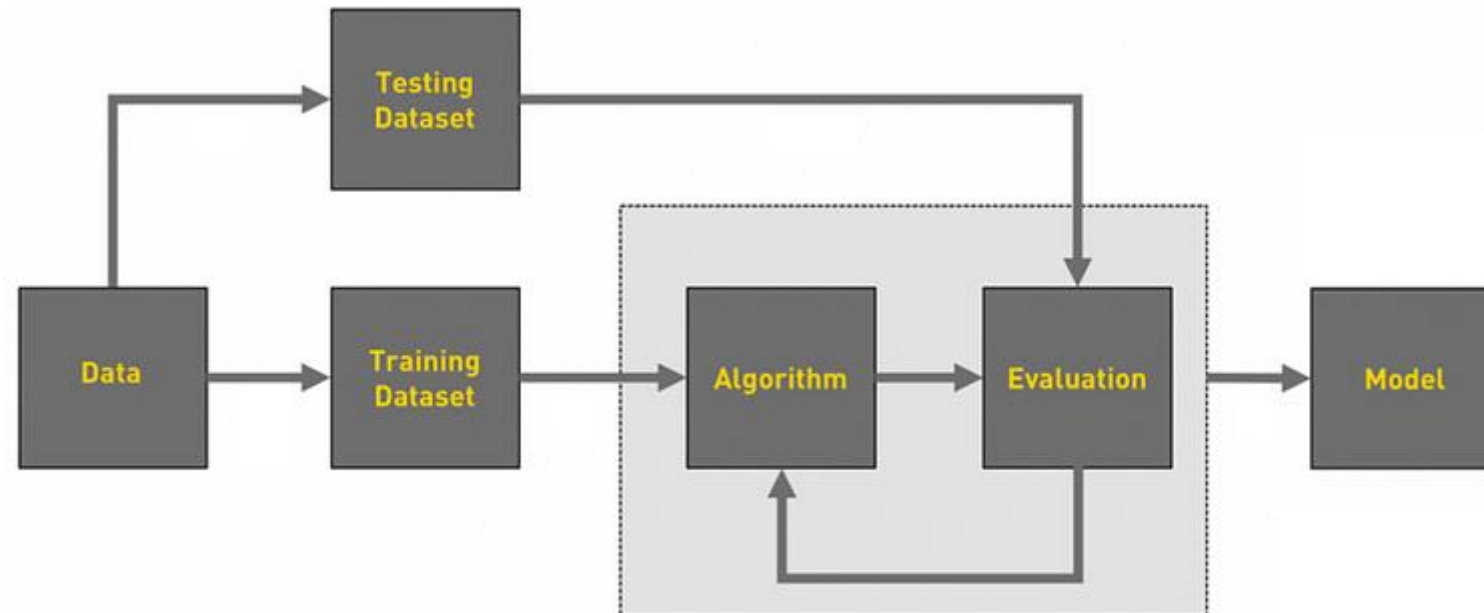

The Software Needs – NN Hardware

- *For NN Hardware Accelerator > Model convertors & Translator*

The Software Needs

- Open-Source trained model or need to be trained
- Optimized & custom model from 3rd Parties
- You need your Data set
- The Standard Training Process
- 80% of the subject for training, 20% for the validation

What AI could offer into your application

- Detect the Default in advance
- Default Material
- Preventive cancer detection in medical applications
- 3D security
- Flow Control on streets, shaping center, traffic light, Airport queueing ...
- Financial Quotation/Annotation
- Reduce costs and improve efficiency in production
- Image segmentation
- Object position
- Autonomous machines
- Volume and material measurement

Available SoM Hardware for Fast Time to Market

Woensdag 19 april 2023
1931 Congressentrum 's-Hertogenbosch

Thank you!

Please visit our stand

For some Renesas hardware demos with AI technology
