RELIABILITY AND ENVIRONMENTAL TESTING

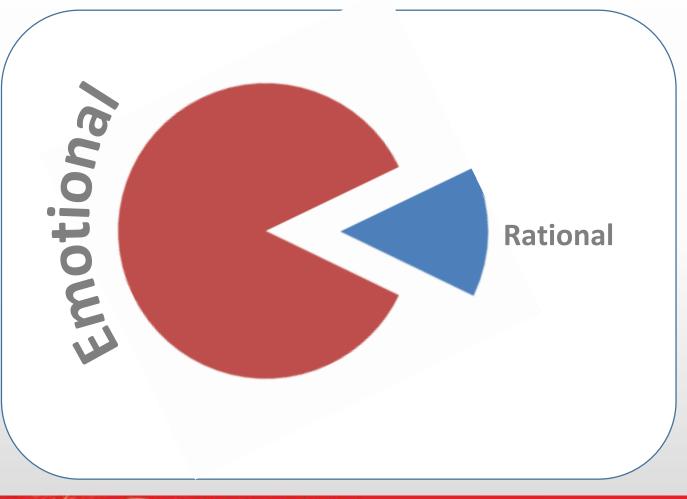

... because it can

Data is being created all the time without us even noticing it. Much of what we do every day now happens in the digital realm, leaving an ever-increasing digital trail that can be measured and analyzed. Just how much data do our tweets, likes and photo uploads really generate? For the third time, Domo has the answer—and the numbers are staggering.

- Why are customers so difficult?
- How do we get a handshake?
- What means Quality Function Deployment?

QFD model

Developers and technicians

- rational behaviour -
 - Ratio to test and predict
 - Characterization
 - Quantitative research possible

Customer and users

- emotional behaviour -
 - Emotional behaviour and responses difficult to test
 - Extensive market studies, long time, expensive, too late to steer development
 - Qualitative research

Test reduction

PLOT CONFERENTIE

RELIABILITY AND ENVIRONMENTAL TESTING

Tailored testing

Tailored testing pro's

1. More value of test

- Effectiveness score
- "always pass" removed
- insight what you test (Tech.Funct.)

2. Less tests and prioritizing

- Only tests with value for function
- 3. Direct relation to customer
 - Customer affected issues first
 - Fast benefits from test

Tailored testing con's

1. Tailored testing competence

PLAT CONFEREN

ELIABILITY AND ENVIRONMENTAL TESTINE

- Experience
- PoF

2. Oustide confort zone

- Language (technicians)
- Insecure fear
- 3. Extra work
 - Next to standard programs
 - Miss out benefits

Conclusion

- Growth of data is given, especially in big data and social data, but to control
 - customer power
 - customer is strange.... (Kano, emotional)

• QFD helpfull tool, not only for quality but as well for reliability and testing

- to trigger customer expectations and give overview and insight
- to rationalize in technical terms and baseline for test tailoring
- to quantify how you perform, show status and progress
- Test tailoring can help to keep effective and less testing
 - shows effectiveness of test (better 3x specific than general)
 - helps with prioritation
 - points you at black spots (no test for a function)
